---

**Report Highlights:**

In 2002, French producers expect to plant 1.84 million hectares of oilseeds, a 4 percent decline from 2001 due to reduced direct payments to growers under Agenda 2000 reformed CAP.

Much of this area is likely to consist of rapeseed (58 percent), followed by sunflowerseed (37 percent) and soybeans (5 percent). Total oilseed production is expected to be 4.85 million MT. Soybean meal is increasingly used to replace meat and bone meals banned from animal feed rations in November 2000, boosting soybean crush and imports of both soybeans and soybean meals. Rapeseed oil, soybean oil and palm oil are also used by the animal feed industry to replace animal fats banned from animal feed rations.

## Executive Summary

In 2002, French producers expect to plant 1.84 million hectares of oilseeds, a 4 percent decline from 2001 due to reduced direct payments to oilseed growers under Agenda 2000 reformed CAP. Much of this area is likely to be planted of rapeseed (58 percent), followed by sunflowerseed (37 percent) and soybeans (5 percent). Total oilseed production is expected to be 4.85 million MT. Soybean meal is increasingly used to replace meat and bone meals banned from animal feed rations in November 2000, boosting soybean crush and imports of both soybeans and soybean meals. Rapeseed oil, soybean oil and palm oil are also used by the animal feed industry to replace animal fats banned from animal feed rations.

## Section I: Situation and Outlook

### Seeds

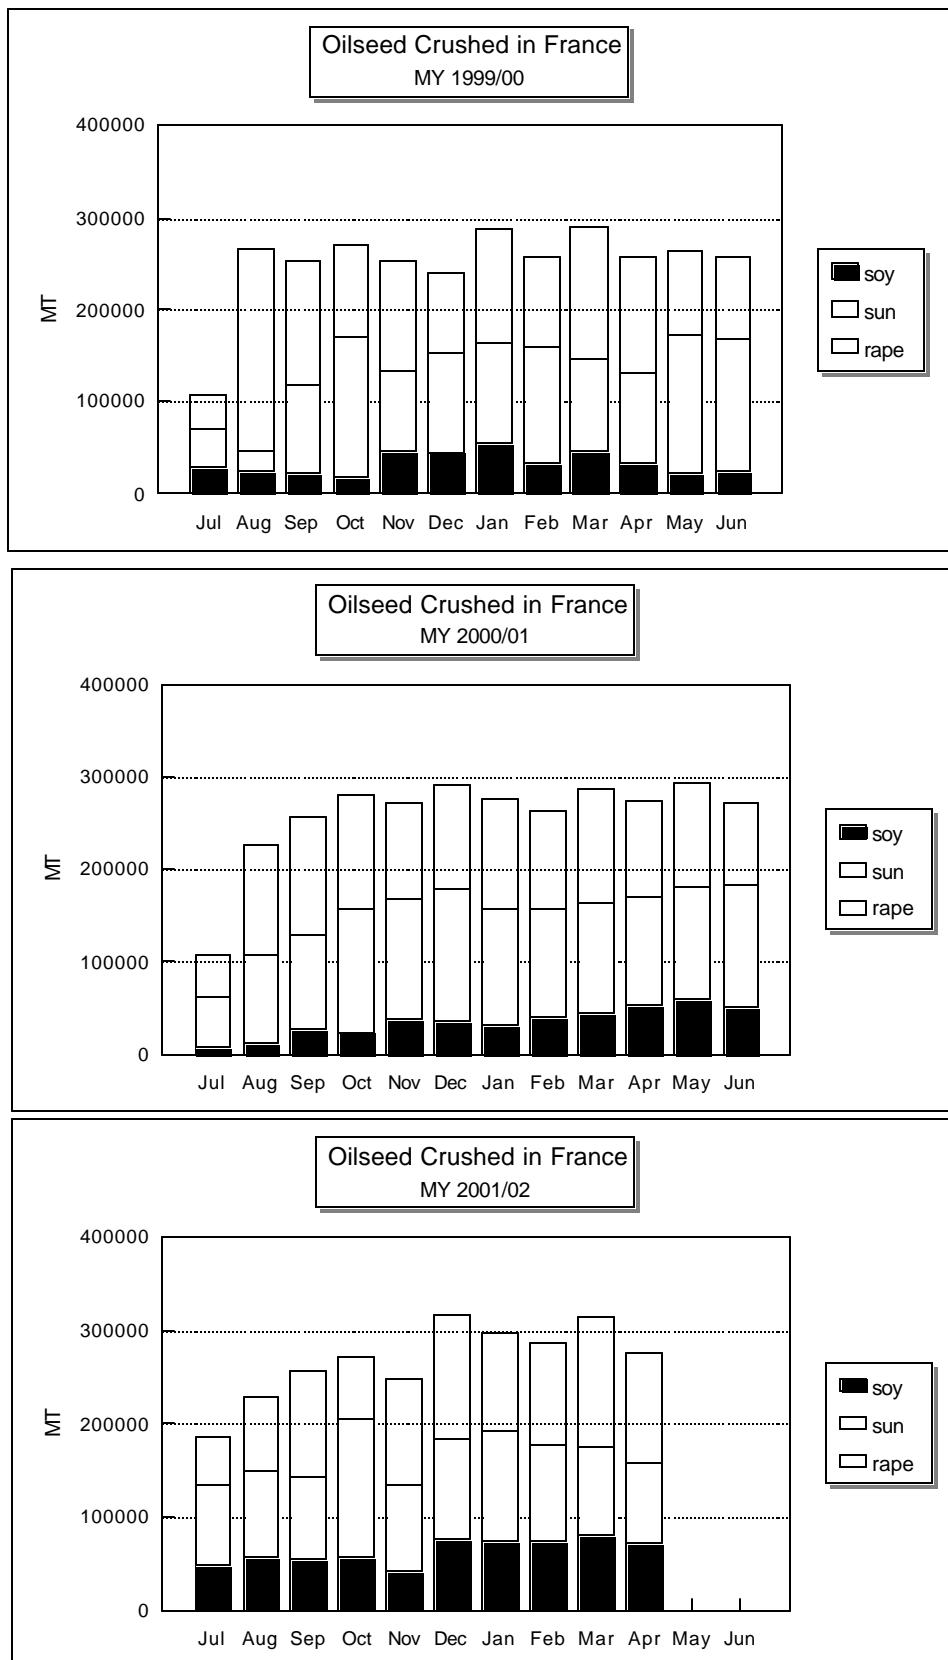

In 2002, French oilseed production is expected to include 3 million MT of rapeseed, 1.6 million MT of sunflowerseed, and 250,000 MT of soybeans. Overall production is expected to be slightly higher than in 2001, due to higher yields, despite slightly reduced acreage. Acreage declined from 2001 to 2002 because of reduced direct payments to oilseed growers under the Agenda 2000 CAP reform.

Industrial rapeseed and sunflowerseed production continues to account for a significant part of total production, as indicated in the table below:

		2000/01		2001/02		2002/03 (forecast)	
		Area (1,000 ha)	Production (1,000 MT)	Area (1,000 ha)	Production (1,000 MT)	Area (1,000 ha)	Production (1,000 MT)
Rapeseed	Industrial	311	895	270	712	275	710
	Food/Feed	914	2,674	826	2,178	788	2,290
	Total	1,225	3,569	1,096	2,890	1,063	3,000
Sunflower seeds	Industrial	66	159	50	110	50	110
	Food/Feed	644	1,654	659	1,469	630	1,490
	Total	710	1,813	709	1,579	680	1,600
Soybeans	Food/Feed	79	207	119	291	100	250
Total Oilseeds	Industrial	377	1,054	320	822	325	820
	Food/Feed	1,637	4,535	1,604	3,938	1,518	4,030
	Total	2,014	5,589	1,924	4,760	1,843	4,850

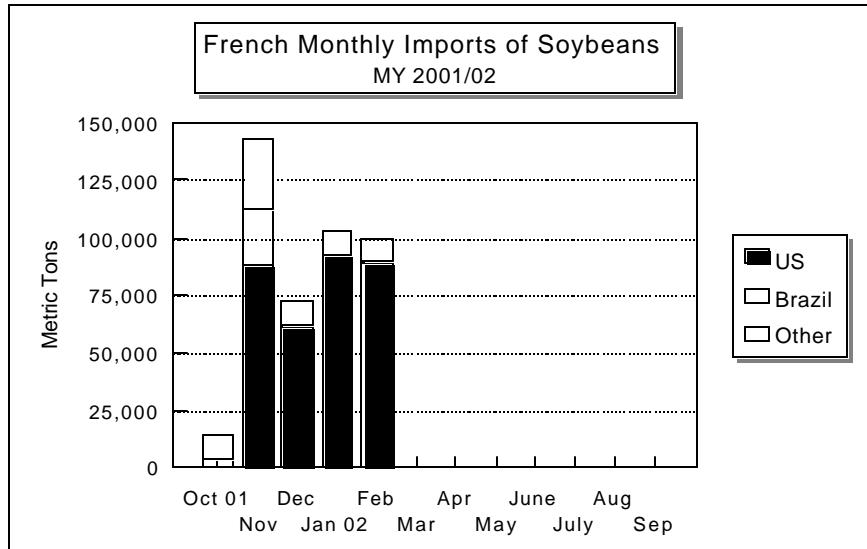

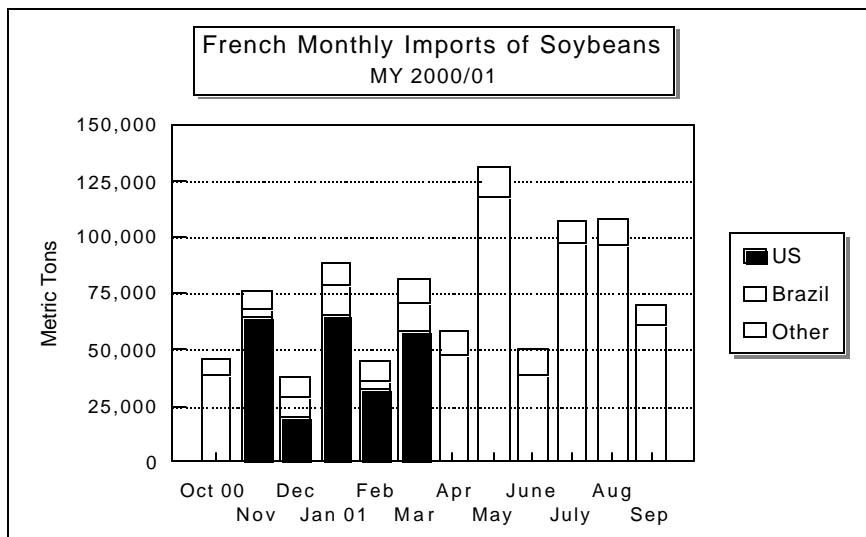

In 2002/03, the area planted to oilseeds for food and feed use is not expected to exceed the French maximum guaranteed area of 1,557,000 ha set by the EU in 1999/00.

## Oilseed Crush

The opposite graphs indicate that there have been more oilseeds crushed since the ban on meat and bone meals from animal feed in November 2000. In particular, the soybean crush has gone up significantly in MY 2001/02.

**Imports of soybeans**

The above graphs show French monthly imports of soybeans from the United States and Brazil for MY 1999/00, MY 2000/01, and the first months of MY 2001/02. They illustrate the significant increase in total imports in MY 2000/01, where Brazil took most of the market from the United States, which used to be France's leading supplier of soybeans. However, from November 2001 to February 2002, French imports of soybeans from the United States significantly increased from MY 2000/01, back from their levels of MY 97/98 and MY 98/99.

## Meals

### Production and Consumption

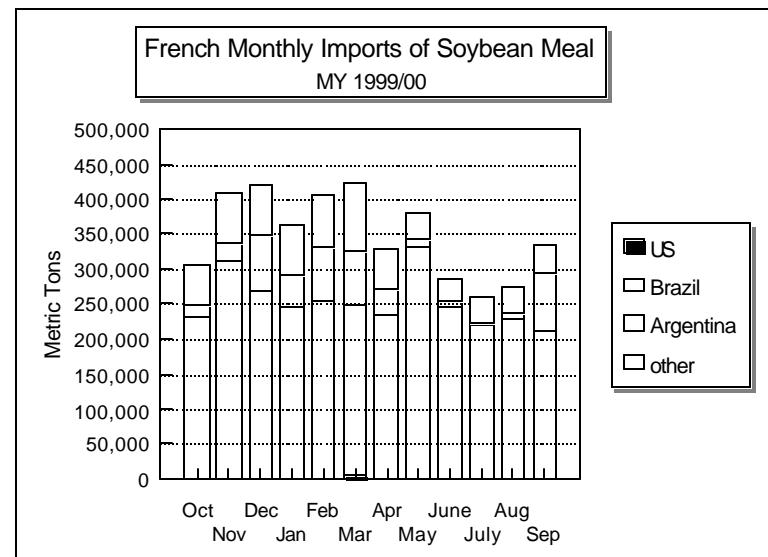

French production and consumption of meals in MY 1999/00 and 2000/01 (July-June) are described in the following tables (in MT). French meal consumption is significantly higher than domestic production, and therefore France needs to imports large quantities of meal to feed livestock and poultry.

MY 1999/00	Production	Consumption	Difference
Soybean Meal	293,434	4,421,520	4,128,090
Rapeseed Meal	742,983	1,062,250	319,267
Sunflower Meal	675,368	1,006,820	331,452
Peanut Meal	42	125,246	125,204
Flaxseed Meal	3	122,187	122,184
Total	1,711,560	6,738,020	5,026,460

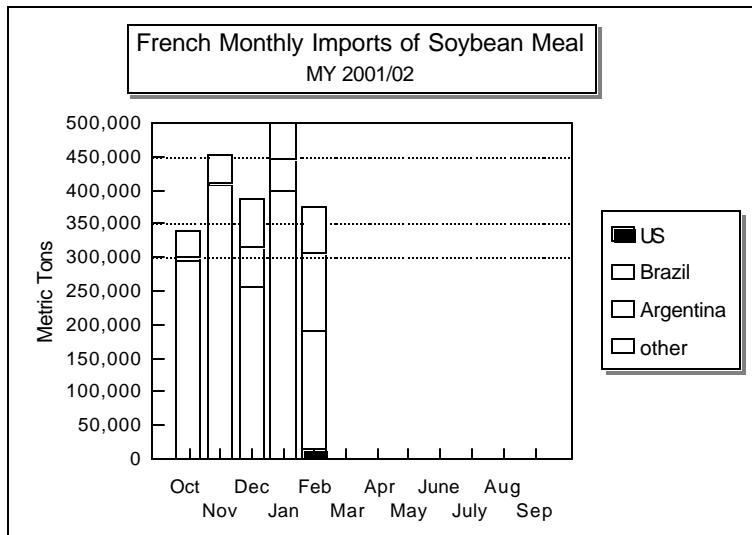

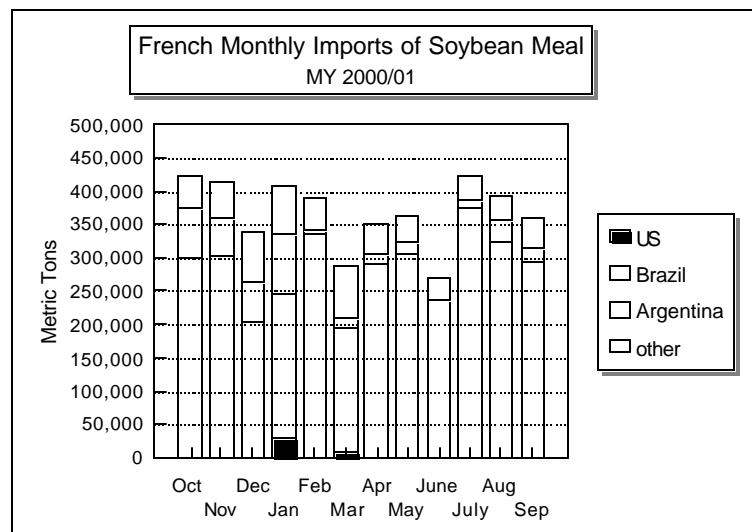

MY 2000/01	Production	Consumption	Difference
Soybean Meal	340,551	4,393,273	4,052,720
Rapeseed Meal	722,573	965,941	243,368
Sunflower Meal	751,151	897,652	146,501
Peanut Meal	3	117,911	117,908
Flaxseed Meal	3	129,760	129,757
Total	1,814,281	6,504,538	4,690,260

France is the leading European producer of compound feed, with 22.68 million MT produced in 2001. The leading feed ingredients used by the French feed industry are grains (45 percent) and oilseed meals (25 percent). Soybean meal accounts for approximately 15 percent compound feed in France.

## Imports of soybean meal

The opposite graphs show monthly imports by France of soybean meal from Brazil, Argentina and the United States in MY 1999/00, MY 2000/01, and MY 2001/02. They indicate that the United States is a minor player in that market, dominated by Brazil. In addition, French imports of soybean meal were significantly higher in the first five months of MY 2001/02 than in the previous years. At this time, it is difficult to ascertain whether this trend will continue.

Note: Feed use of rapeseed oil, soybean oil and palm oil was revised up in the PS&D tables, due to the increased use of these oils to replace animal fat banned from animal feed rations since November 2000.
