Citrus

Annual

2004

Approved by:

Asif J. Chaudhry
U.S. Embassy, Cairo

Prepared by:

Gilad Shachar

Report Highlights:

Citrus production in MY 2004 is forecast at 575,000 MT, 15 percent higher than the previous year. The increase in production is a result of favorable weather conditions and the increased yields of or, mor, shamouti, navel, red and white Pomelo varieties. Citrus exports are expected to increase by 8 percent compared to the previous year, going mainly to the European Community (EU). Delivery to processing plants is expected to increase by 25 percent over MY 2003 levels.

Executive Summary

The forecast for total production of citrus in MY 2004 is forecast at 575,000 MT, a 15 percent increase compared to the previous year. Out of the total production, approximately 161,000 MT will be exported (17 percent higher than in the previous year), 234,000 MT will be processed (up 25 percent), and 180,000 MT are expected to be consumed fresh (4 percent increase from the previous year). The increase in production is a result of favorable weather conditions, and an increase in the yields of or, mor (and other easy peelers), shamouti, navel, red & white Pomelo varieties.

Production

Total Production

The forecast for MY 2004 is for a total production of 575,000 MT, an increase of 15 percent. The yields for or, mor, shamouti, navel, red and white pomelo and other easy peeler varieties increased in MY 2004. The increased harvest is a result of favorable weather conditions and the "fluctuations phenomenon", an exceptional high yield that occurs once every four to five years.

Planted Area

The planted area at the beginning of summer 2004 totaled 17,500 ha, of which 16,891 were fruit-bearing. Increasing demand for citrus in Europe and high profitability have stimulated

¹ Other Citrus- Kumquat, Ethrog (Citron), Red & White Pomelo, Limquat.

new demand for citrus seedlings. The demand is mainly for the following varieties: or, ora, mor, merav (easy peelers), shamouti and newhole. The price for seedlings is \$4.44 to \$5.55 per seedling. The total planted area in CY 2004 expanded by almost forty hectares, of which 60 percent (24 ha) were of the or variety. In addition, approximately 60 percent (380 ha) of the new plantings during the last three years were of the easy-peeler varieties (see table 6). There are about 1,300 citrus growers in Israel.

Table 4: Planted Area by Variety, MY 2004, Hectare

Production Conditions

The citrus industry benefited from favorable production conditions during crop year 2004. The blossoming in the spring was good, and there were no heat waves during the summer. As a result, the citrus quality is good, and the yield is large compared to the previous year.

Yields

The average yield in MY 2003 totaled approximately 28 tons per hectare. Due to the favorable weather conditions, the average yields in MY 2004 will increase by 10-15 percent compared to the previous year. In MY 2004 the yields for oranges, easy-peelers, and white/red pomelo is expected to show an average increase of 24, 40 and 90 percent, respectively. As a result of the increased yields, the size of the citrus fruit is smaller. The smaller size may improve the grapefruit results but may reduce the price for the easy peelers and the oranges.

Value of Citrus Production

In CY 2003, citrus production value increased by 2.6 percent over that in the previous year. Citrus value, as a share of total agricultural production, also increased significantly during CY 2003 (see table 7).

Table 7: Agriculture Production Value, \$ million, Nominal Terms, CY, ²

Agricultural Value	2001		2002		2003	
	Value	Percent	Value	Percent	Value	Percent
Grand Total	3,255.33	100.00%	3,474.22	100.00%	3,564.66	100.00%
Of which: Citrus	149.55	4.60%	134.44	3.87%	148.22	4.16%

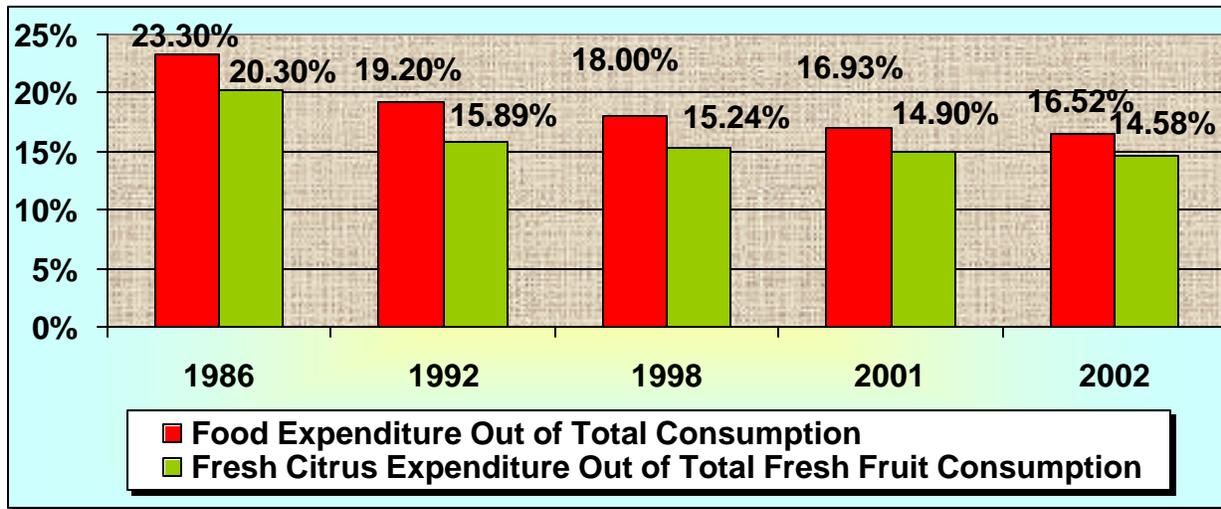

Source: Central Bureau of Statistics- Israel

Consumption

Local consumption of fresh citrus in MY 2003 totaled about 173,000 MT, 34 percent higher than in the previous year. Another 190,000 MT were delivered to the processors. Continued growth in purchasing by the Palestinian Authority account for this increase. Total consumption per capita of all citrus in 2003 stands on 54.5 kg.

² Exchange Rate: \$1 U.S. = 4.5 New Israeli Shekel

The Processing Industry

Deliveries to the processing industry have decreased significantly during the past decade: in MY 2000/2001 deliveries to processing plants totaled 313,897 tons, while in MY 2003/2004 deliveries dropped to 189,317 MT. In spite of this trend, due to increased yields the forecast for citrus deliveries to the processors, in MY 2004/2005 is for 234,000 MT. Ten years ago there were ten processors in the citrus industry. Currently only three were left. Ninety-five percent of deliveries are for squeezing, and the rest is for slices. The main citrus variety for industry is grapefruits. Due to insufficient quantities to operate their facilities at full capacity (600,000 MT), the processors focus on high value products such as fresh juices (pure citrus or mixed with other fruits).

Table 9: Delivery to the Processing Plants, MY, Tons

Purpose	Variety	2002/03	2003/04	03/04 Percent Change Compared to 02/03	03/04 Market Share

Trade

Citrus exports from Israel increased by 15 percent during MY 2003 compared to the previous year. The forecast for MY 2004 is for another increase of 17 percent for a total of 161,000 MT. The increased export is due to a shortage of oranges and grapefruit from Florida and increased production in Israel. Western Europe is still the major market for Israeli citrus, but demand in Eastern Europe, especially in Russia, is increasing. Israeli citrus exports to Russia have increased by 50 percent compared to the previous year (from 14,000 MT to 21,000 MT). Exports to Russia are mainly easy peelers and red grapefruits.

One-third of total citrus exports were the sunrise variety. This is the first year that easy peeler exports have exceeded orange exports. Data up to August 2004 show that the value of citrus exports has increased by 18.5 percent compared to the same period in the previous calendar year (see chart 3). Growers' revenues from exports in MY 2003/04 have increased due to higher price for citrus, which is a result of higher quality and a shortage of citrus from competing countries, mainly Spain, Greece and Turkey. The favorable exchange rate of the euro has also contributed to the improved results. The sweetie export to Japan in MY 2004 is

expected to be equal to that in MY 2003. However, this year each Japanese importer can choose his Israeli supplier. That was not the case in previous years when the Israeli sweetie was sold by one supplier. In addition, Israel will export yellow sweetie to Japan, which will compete with Florida's sweetie for the first time.

Israel has signed a new export agreement with Italy to cover a period of three years for a quota of 600,000 cases of red and white grapefruit (2/3 red and 1/3 white). This amount is forecast to increase by 10 percent in each of the next two years.

Israel exports very little fresh citrus to the United States. In MY 2002/2003, the U.S. market represented 1.7 percent of all Israeli fresh citrus exports. This was a small increase over the previous year. The forecast for 2004/2005 is for another increase of about 10 percent, for a total of 2,260 MT.
