

# Oilseeds: World Markets and Trade

## *Drought Forecast to Reduce Australian Rapeseed Exports in 2007*

Australia's rapeseed exports are forecast to decline nearly 60 percent to 350,000 tons in 2007. Lower exports are in response to this season's dry weather that has cut production by two-thirds relative to last season. Production in 2007 is forecast to reach 500,000 tons. This would be the smallest crop since 1995 when considerably fewer hectares were planted.

Reduced Australian exports will require traditional markets in Asia to look to Canada for additional rapeseed. Accordingly, Canada's 2006/07 rapeseed export forecast was increased 200,000 tons this month to 5.5 million tons. Tight rapeseed supplies in Australia have also forced the local processor to turn to Canada for additional rapeseed. Currently, imports are forecast to reach 50,000 tons in the coming year. This would be the first imports of rapeseed by Australia since 1983 when 18,000 tons were imported.

## **Other significant changes for November 2006**

- EU25 soybean and product estimates for 2005/06 were adjusted based on year-to-date trade statistics. Soybean imports for 2005/06 were reduced 100,000 tons to 13.8 million tons while soybean oil imports were lowered 50,000 for both 2005/06 and 2006/07 to 675,000 and 925,000 tons respectively. Soybean meal imports for 2005/06 were increased 328,000 tons to 22.9 million tons.
- EU25 palm oil imports for 2005/06 were lowered 400,000 tons to 4.1 million tons with a similar decline for 2006/07 to 4.5 million tons. Reported EU25 imports through August 2006 show little change from the previous year when imports reached 4.0 million tons.
- EU25 sunflowerseed oil imports for 2005/06 were increased 225,000 tons to 1.3 million tons based on marketing year trade data through August 2006. A similar increase was made to the 2006/07 import forecast. Sunflowerseed imports for 2005/06 were lowered 100,000 tons to 850,000 tons this month with 2006/07 imports reduced 50,000 tons to 910,000 tons.
- Russia's 2006/07 sunflowerseed meal and oil export forecasts was increased in response to a higher 2006 sunflowerseed production forecast. Production was increased 700,000 tons to 6.9 million tons.
- The Ukraine's 2006/07 sunflowerseed oil export forecast was raised 60,000 tons to 1.15 million tons following an increase in forecast 2006 sunflowerseed production. The production forecast was increased 500,000 tons to 4.9 million tons this month.
- China's Peanut export forecast for 2006/07 was increased 120,000 tons to 920,000 tons. Improved 2006 crop quality relative to last year is expected to lead to a rebound in exports for the coming year.

### **U.S. Soybean Industry developing marketing opportunities in Chinese Aquaculture**

## Special Article

### **U.S. Soybean Industry Developing Marketing Opportunities in Chinese Aquaculture**

FAS staff, along with a U.S. soybean farmer leader group, visited China in August, 2006. The group spent several days visiting various fish farms learning about developments in the Chinese aquaculture industry and ways in which the U.S. soybean industry is assisting local fish farms improve their production outcomes. Aquaculture is the cultivation of animals and plants in water. The U.S. soybean industry aquaculture program in China initially developed and tested marine fish feeds and high soybean meal inclusion rates between 1999 and 2003. In addition, the U.S. soybean industry is developing fish cages that can withstand ocean storms. Improved ocean cage technology will lead to production expansion.

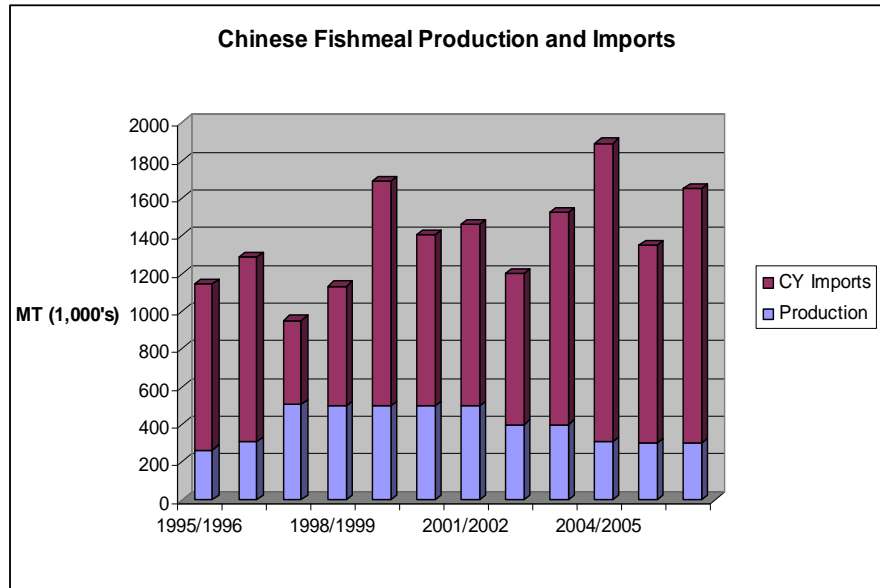

In 2004, total Chinese aquaculture production reached approximately 36 million metric tons, increasing from 1.2 MMT in 1979. In China, aquaculture production increased from 59 percent of the national fishery total in 1994 to 68 percent in 2004. The FAO estimates that world aquaculture production in 2004 totaled 58 million tons with China producing 36 million tons or 62 percent of the total. Aquaculture is essentially replacing capture fisheries, (which have reached maximum sustainable yields) in terms of importance to China's economy, thus increasing the demand for formulated feeds.

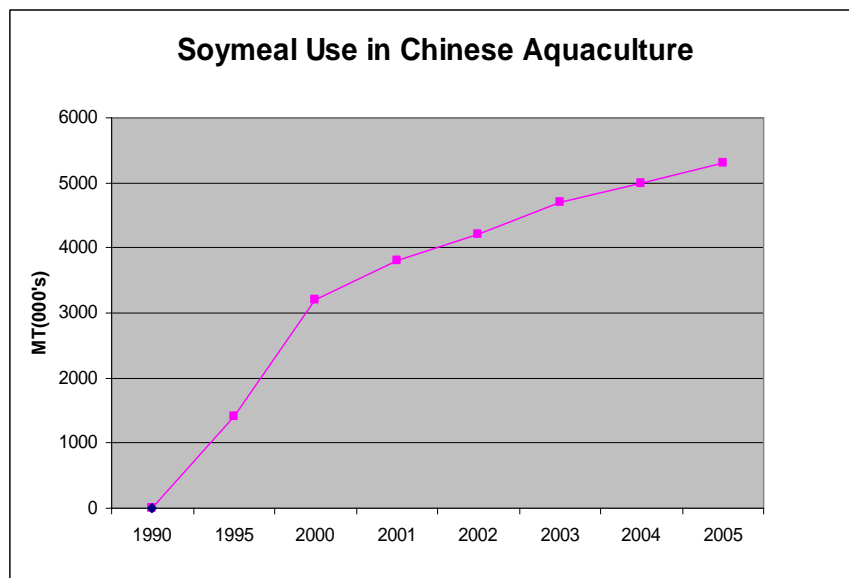

\*FAO DATA

The U.S. soybean industry recognized the need for soy product applications in aqua feeds in China and elsewhere due to increasing global demand for seafood products. Fishmeal is considered an ideal feed ingredient because it is high in protein, has a good amino acid profile, palatable to fish (and other animals) and fairly economical until the recent run-up in prices. However, world fish stocks are limited and unreliable. The supply is impacted by weather events and government actions leading to erratic prices and lower supply.

Peru and Chile produce approximately half of the world's fishmeal. A fishing ban put in place by the Peruvian Government in the summer 2006 led to dramatically higher world prices. The fishing ban was lifted on November 2, 2006, but once the 2 MMT quota is reached, another ban will be put in place which will mostly likely last until April, 2007. In addition, weather forecasters are monitoring the warming of sea level temperatures possibly indicating the development of an El Nino. The development of an El Nino would further impact fishmeal production negatively in South America.

The use of soybean meal in aqua feeds was virtually non-existent in 1990, but has grown to approximately 5 MMT in 2005. Besides consistent quality and cost advantages, soybean meal has better feed conversion ratios, improves water quality and sustainability. There are some digestibility issues in the soybean meal itself, but these can be potentially resolved using soy protein concentrates or isolates. Soy concentrates are starting to be produced in China and priced to compete with and replace fishmeal.

\*Data sourced from ASA

China has the available resources to expand its aquaculture production and along with it, its use of soybean meal. As new feed technologies are developed and production possibilities are explored, soybean meal use in this industry will continue to grow.
