

TABLE 18

The table below presents a 22-year record of the differences between the September projection and the final estimate. Using world wheat production as an example, changes between the September projection and the final estimate have averaged 10.0 million tons (1.9%) percent) and ranged from -30.7 to 13.1 million tons. The September projection has been below the final 12 times and above the final 10 times.
