# World Agricultural Production

## Fifth Consecutive Record For India Cotton Output

India's 2007/08 cotton production is forecast at a record 22.5 million bales, up 1.0 million from last year. The area forecast is a record 9.5 million hectares, up 0.4 million or 4 percent from last year. Assuming a normal 2007 monsoon, production is forecast to increase 5 percent over last season due to a higher sown area and a forecast record yield. According to the FAS Office of Agricultural Affairs in New Delhi cotton planting for the 2007/08 season is forecast to increase to 9.5 million hectares as a result of strong cotton prices and positive returns received by farmers in 2006/07. FAS/New Delhi anticipates that Bt cotton planting in 2006/07 to climb to 6.6 million

hectares, thereby accounting for 70 percent of the expected cotton area. In 2006/07, the government of India (GOI) approved 62 new insect resistant Bt varieties for commercial cultivation. In addition to the approved varieties, there are over 50 Bt

cotton hybrids, illegally bred and marketed by farmers and seed companies, which are available at lower prices versus the officially approved varieties. It is widely accepted that the strong upward trend in India's cotton yield in recent years is a direct result of the increasing adoption of Bt cotton. Given the continuing development of optimally suited Bt varieties for the various production zones within India and the year-to-year increase of Bt area, a record yield of 516 kilograms per hectare is forecast for the season. In the absence of pressure from insects, Bt varieties are not typically higher yielding than other quality hybrids or non-GMO varieties, however a yield advantage is realized in India through the significant reduction of yield losses due to bollworms. (For more information, contact Jim Crutchfield at 202-690-0135.)

## **Argentina Record Soybean Production in 2006/07**

Argentina's soybean production for 2006/07 is forecast at a record 46.5 million tons, up 3 percent from last month and up 15 percent from last year. Harvested soybean area for 2006/07 is forecast at a record 15.9 million hectares, up 1 percent from last month and up 5 percent from last year. Yield is forecast at a record 2.92 tons per hectare, up 1 percent from last month and up 10 percent from last year. As of May 31, harvest was 90 percent complete compared to 94 percent this time last year, according to Argentina's Secretariat of Agriculture (SAGPyA). The soybean harvest has been behind last year for most of the season due to heavy rains at the end of March. Most of the remaining soybeans to be harvested are from second crop soybeans. Despite the heavy rains and flooding in parts of Entre Rios, Santa Fe, Cordoba, and Buenos Aires during the last week of March, very high yields have been obtained, especially for the second soybean crop. A record forecast production is maintained due to optimal weather for most of the growing season, especially in Cordoba and Buenos Aires. Harvested area has been adjusted upward from last month to reflect the very low abandonment (e.g. 0.8 percent) on the currently harvested 14.5 million hectares. (*For more information, contact Nicole Wagner at 202-720-0882.*)

## **Argentina's Wheat Planting Intentions Revised Upward**

Argentina's wheat production for 2007/08 is forecast at 14.0 million tons, up 9 percent from last month, but down 1 percent from last year. Harvested wheat area for 2007/08 is forecast at 5.0 million hectares, up 9 percent from last month, but down 5 percent from last year. Yield is forecast at 2.80 tons per hectare, which is nearly unchanged from last month, but up 4 percent from last year. As of June 1, 15 percent of the forecast wheat area was planted, as reported by the Bolsa de Cereales Buenos Aires. Most of the sowing progress has taken place in the Northern provinces and northern Cordoba. Although recent windy and dry conditions have slowed harvest progress in Buenos Aires province, a trend yield of 2.80 tons per hectare is achievable given ample early season moisture and assuming a return to normal conditions. Buenos Aires province is the largest wheat producer, accounting for approximately 60 percent of the country's total production. Cordoba and Santa Fe account from approximately 16 and 11 percent of the total wheat output, respectively. In March 2007 Argentina's government closed the wheat export registry to keep flour prices low and curb inflation, thus creating a lower internal price for wheat. The higher prices for corn and soybeans, along with their weaker link to domestic food prices, had initially led many farmers to decrease wheat area intentions and increase their intended area of corn and soybeans. In May, however, international demand had increased prices for Argentine wheat, and soil moisture had been nearly optimal, leading to an increase in wheat planting intentions. (*For more information, contact Nicole Wagner at 202-720-0882.*)

## **China: Smaller Rapeseed Crop Forecast for 2007/08**

China's 2007/08 rapeseed production is forecast at 12.0 million tons, down 0.7 million or 6 percent from last year. Area is estimated at 6.7 million hectares, down 0.3 million from last year and the smallest area in 9 years. The forecast yield of 1.79 tons per hectare is lower than last year's record yield but above the 5-year average. About 85 percent of China's rapeseed crop is sown in the fall and harvested in spring. Most of the crop is grown in the Yangtze River basin and Sichuan basin. Planted area for the 2007/08 winter crop declined for several reasons, including dry planting conditions, higher relative prices for winter wheat, and labor shortages that led to a reduction in double-cropping. Despite various weather difficulties during the growing season, including unusually warm winter temperatures, an untimely freeze in early March, frequent temperature changes in April, and spring drought in Sichuan and Hunan, most areas have reported fair to good yields. These reports are supported by higher than expected winter wheat yields in the same region. The winter rapeseed harvest started in late April and should be nearly complete. The summer rapeseed crop (grown in northern China) was planted in May and will be harvested in August. (*For more information, contact Paulette Sandene at 202-690-0133.*)

## **China: Soybean Area and Production Expected to Drop in 2007/08**

China's 2007/08 soybean production is forecast at 15.6 million tons, down 0.6 million or 4 percent from last year. Area is estimated at 8.8 million hectares, down 0.5 million or 5 percent from 2006/07. High corn prices and relatively low returns for soybeans encouraged farmers to shift from soybeans to corn. Most of the reduction occurred in Heilongjiang, where planted area dropped by an estimated 400,000 hectares. Soybean area was expected to remain stable in other regions. The estimated yield of 1.77 tons per hectare is higher than last year but close to the 10-year trend. More than 50 percent of soybeans are grown in Northeast China (Heilongjiang, Jilin, Liaoning, and Inner Mongolia). Planting preparations began in April, but late spring rain and snow delayed sowing progress. Warmer weather in May allowed planting to proceed quickly and finish on schedule in Heilongjiang and central Jilin. Soil moisture was favorable and good emergence was reported. A localized drought in western Jilin, eastern Inner Mongolia, and northern Liaoning caused planting delays, but recent rainfall has eased the drought and improved growing conditions for emerging summer crops. On the North China Plain, spring-sown soybeans were planted in April under mostly favorable conditions. A spring drought in the Southwest and Yangtze River basin may have prevented or delayed planting in some areas. Widespread heavy rain since May 20 has greatly improved soil moisture levels for vegetative spring soybeans and improved planting conditions for the summer soybean crop, which will be planted on the North China Plain after the winter wheat harvest in June. (*For more information, contact Paulette Sandene at 202-690-0133.*)

## **Ukraine: Drought Reduces Yield Prospects for 2007/08 Wheat**

Persistent dryness in nearly every region of the country has reduced the forecast 2007/08 wheat yield for Ukraine. Wheat production for 2007/08 is estimated at 14.0 million tons, down 3.5 million from last month and matching last year's output. Area is estimated at 6.0 million hectares, unchanged from last month and up 0.5 million from last year. Cumulative precipitation from October through May is the lowest in over ten years in some of the country's key wheat territories, and the dryness has been accompanied by excessive heat in recent weeks. Vegetative indices indicate especially poor overall crop conditions in southern and eastern Ukraine. Winter wheat accounts for approximately 95 percent of total wheat production in Ukraine. (*For more information, contact Mark Lindeman at 202-690-0143.*)

## **Russia: Estimated Wheat Production Down Following Localized Dryness in Key Winter Wheat Zone**

Drought has reduced yield prospects for winter wheat in parts of Russia's Southern District, the country's key winter wheat zone, but vegetative indices indicate that crop conditions in most other parts of the winter wheat zone remained reasonably favorable as of May 24 despite recent dryness. The USDA estimates Russia wheat production for 2007/08 at 45.0 million tons, down 7 percent from last month but up less than 1 percent from last year. Area is estimated at 24.3 million hectares, down 2 percent from last month but up or 3 percent from last year. Winter wheat comprises roughly 40 percent of total wheat area and 60 percent of production. Approximately 14.2 million hectares of winter grains were sown for 2007/08, against 14.4 million last year, but harvested winter-grain area is forecast to increase substantially this year due to unusually low winterkill following an extremely mild winter. (*For more information, contact Mark Lindeman at 202-690-0143.*)

This report uses information from the Foreign Agricultural Service's (FAS) global network of agricultural attachés and counselors, official statistics of foreign governments and other foreign source materials, and the analysis of economic data and satellite imagery. Estimates of foreign area, yield, and production are from the International Production Assessment Branch, FAS, and are reviewed by USDA's Inter-Agency Commodity Estimates Committee. Estimates of U.S. area, yield, and production are from USDA's National Agricultural Statistics Service. Numbers within the report may not add to totals because of rounding. This report reflects official USDA estimates released in the World Agricultural Supply and Demand Estimates (WASDE-442), June 11, 2007.

**TABLE 18**

The table below presents a 26-year record of the differences between the June projection and the final estimate. Using world wheat production as an example, changes between the June projection and the final estimate have averaged 15.4 million tons (2.8 percent) and ranged from -32.2 to 29.6 million tons. The June projection has been below the final 15 times and above the final 11 times.

**RELIABILITY OF PRODUCTION PROJECTIONS**

1/ The final estimate for 1981/82-2004/05 is defined as the first December estimate following the marketing year.

2/ May not total 25 if projection was the same as the final.

3/ Includes corn, sorghum, barley, oats, rye, millet, and mixed grain.
