World Agricultural Production

Argentina Wheat Production Boosted by Rains

Spring Wheat Growth Stages

Cumulative Precipitation 10/20/10 - 11/5/10

Recent rains through much of Argentina have pushed yields to possibly rival last year's record-breaking grain yield. A smooth harvest will help Argentine farmers see more production.

Argentina: Wheat Area is Now Estimated Larger with Good Early Rains

The USDA forecasts Argentine wheat production for 2010/11 at 13.5 million tons, up nearly 13 percent from last month and up 29 percent from last year. Area is estimated at 4.5 million hectares, up 5 percent from last month and nearly 29 percent from last year. Yield is forecast at 3 tons per hectare, the same as the record high obtained last year and higher than the five-year average of 2.58 tons per hectare.

Timely rains have increased yield expectations in the wheat-growing regions in Argentina. Early low soil moisture reserves caused worries and reduced planting expectations, but the onset of rains and continued high wheat prices pushed more area into wheat than previously estimated. Frequent rains have promoted wheat plant growth and development and now are aiding in grain

fill. Wheat is heading in the province of Buenos Aires with some early planted fields in the northern region being harvested. Excellent temperatures and soil moisture in the Buenos Aires delegation of Bragado have increased yield expectation. Fungicide applications have limited problems with disease and currently no insect problems are seen. In the delegation of Junín, conditions are good. Good soil moisture from recent rain has allowed filling to progress in Pergamino. Fungicides are being sprayed to prevent *Fusarium* outbreaks from the moisture. Only a few wheat plants in the area are showing some white spots on the flag leaf, signaling possible light traces of powdery mildew. Temperatures are now warming from recent cool weather, preventing the spread of fungal problems. Soil is drying around the delegations of Salliqueló and Pigüé, but no insects or diseases are appearing in fields. Recent rain has helped in the Tandil region with warming temperatures. Very slight powdery mildew and *Septoria* blotch have appeared and these areas have been sprayed. In Tres Arroyos, the wheat is reported to be in very good conditions. In the drier regions of Coronel Dorrego and Coronel Pringles, harvest has begun but yields will be limited. In Córdoba, beginning harvest looks promising, particularly in the southeast. Despite foliar disease problems in the province, good soil moisture will carry the crop through grain fill and boost yields. Entre Ríos wheat fields are mixed in development from flag leaf to flowering to grain fill. Harvest is expected to start during the last half of November. La Pampa had recent, beneficial, late rains. Only the far western region will show yield drag from early dry conditions. Overall Santa Fe conditions are favorable with some fungicide applications being made on fields; but in the delegation of Casilda, extremely dry conditions are reducing plant vigor. Wheat conditions in San Luis and Chaco are being reported as good. Very early planted wheat in Chaco has lower yields but as combines move into later planted fields, yields are improving. In the North, higher temperatures have been accompanied by rain. Yields in Jujuy are about double those in Salta with early combine readings, but later planted fields in Salta have good yields equal to those in Jujuy. Tucumán is reaping excellent wheat yields. Vigilant crop scouting and promotion of fungicide use along with frequent, timely rain have benefited wheat fields in Argentina. (*For more information, contact Denise McWilliams at 202-720-0107.*)

Argentina: Soy Area Expanding into More Pastureland

The USDA forecasts Argentine soybean production for 2010/11 at 52 million tons, up 4 percent from last month but 4.6 percent less than last year. Area is estimated at 18.6 million hectares, up 3.3 percent from last month but the same as last year. Yield is forecast at 2.80 tons per hectare, compared to a record high in 2006/07 of 2.99 tons per hectare and a five-year average of 2.69 tons per hectare. This yield is 4.6 percent below last year.

Good planting conditions from recent rains in much of the prime farm land area have allowed soy planting to reach 15 percent complete at the end of October. High crop prices along with better soil moisture and some conversion of pastureland into cropped soy have increased the forecast for Argentine soybeans. Within the province of Buenos Aires, the delegation of Bragado has hastened planting as soil temperatures reached excellent levels for seeding first crop soy. With recent high prices for young cattle, some ranchers are choosing to rent the land for soy. Good moisture and soil temperature encouraged planting in the province of Córdoba where some soybeans are already emerging. Recent rain in the delegation of Marcos Juárez has pushed planting so quickly that custom planters are in high demand. In central Córdoba, group III and IV medium season varieties soybeans are going into the ground while further north, farmers are

planting group IV and V longer season varieties with hopes that consistent rain can push yields on these soybeans through the season. Fertilizer is being applied to some fields in central Córdoba regions to boost yields. In the delegation of Villa María, soy planting has advanced two percent as of October 28. (*For more information, contact Denise McWilliams at 202-720-0107.*)

Australia's 2010/11 Wheat Crop Prospects Holds Despite Poor Conditions along the West Coast

Australia's 2010/11 wheat crop is maturing, with the majority of the crop close to harvest. Overall the USDA forecasts production at 24 million tons, up 1 million or 4.3 percent from last month, and up 1.5 million or 7 percent from last year. The crop is projected to be the biggest in four years. The area is forecast at 13.4 million hectares, up 0.8 percent from last month, but down 3 percent from last year. The yield is forecast at 1.8 tons per hectare, 10 percent higher than last year. The major wheat cropping areas in New South Wales, Queensland, Victoria, and South Australia experienced excellent water availability throughout the season, combined with cooler weather. The wheat crop in eastern growing areas is reported to be the best in many years. In contrast, Western Australia reports that this could be one of the worst seasons for wheat and other winter crops in over 40 years, with dry conditions and above-average temperatures throughout the season. The season's low soil moisture conditions have significantly cut wheat output for much of the west, while above-average rainfall and overall healthy crop conditions in the eastern states have boosted yield potential. The yield gains in New South Wales, Queensland, Victoria, and South Australia will more than likely offset the poor outcome in Western Australia. (*For more information, contact Dath Mita at 202-720-7339.*)

Russia: Coarse Grain Output Down 46 Percent from Last Year

A combination of lower area and sharply reduced yield caused Russian coarse-grain production to plunge this year. The combined output of barley, corn, rye, and oats for 2010/11 dropped to an estimated 17.3 million tons, from 31.8 million tons last year. Coarse-grain area decreased by 12 percent, from 15.9 to 14.0 million hectares, and yield fell by 38 percent, from 2.00 to 1.24 tons per hectare. Barley production is estimated at 8.5 million tons (against 17.9 million last year), corn at 3.0 (4.0) million, rye at 2.1 (4.3) million, and oats at 3.5 (5.4) million. Area and production estimates for individual coarse grains and other crops can be viewed at [PSD Online](#).

Most coarse-grain output is used for feed, including 70 to 90 percent of barley, corn, and oats (but only 15 to 30 percent of rye). Coarse-grain area has decreased by about 60 percent since 1987/88, concurrent with a similar contraction in livestock inventories and a resultant decrease in demand for feed grains. Although inventories have begun to recover in recent years (especially for poultry and pigs) and feed-grain consumption has stabilized somewhat, unfavorable prices for barley prior to the 2010/11 spring sowing campaign contributed to a 20-percent drop in barley area this year.

The chief reason for the year-to-year reduction in 2010/11 coarse-grain output was the extreme dryness and excessive heat that prevailed in the Volga Valley and neighboring regions throughout most of the growing season. Because of the remarkable drought, 13.3 million hectares of cropland were destroyed including nearly half of the grain area in the Volga District. According to harvest data from the Ministry of Agriculture, barley yield in the Volga District is

down 55 percent from last year. (*For more information, contact Mark Lindeman at 202-690-0143.*)

China Cotton: Area and Production Estimates Continue to Decline

China's cotton production for 2010/11 is estimated at 30.0 million bales (6.53 million tons), down 1.5 million or 5 percent from last month and down 2.0 million or 6 percent from last year due to lower estimated area and yield. Cotton area is estimated at 5.1 million hectares, down nearly 4 percent from last year. Farmers made significant area reductions on the North China Plain in response to high production costs, unpredictable yields, and lower profits compared to grain crops. Meanwhile, planted area reportedly increased marginally in the Yangtze River basin due to rising cotton prices at the start of the season. There are various estimates for 2010/11 planted area in Xinjiang, which accounts for more than 25 percent of China's cotton area and about 44 percent of total production. Most sources expected area to be close to last year's level.

The estimated yield of 1281 kilograms per hectare is down 2 percent from last month and nearly 3 percent from last year. In many parts of eastern China, unusually heavy rain and cloudiness in August and September caused yield and quality losses, slowed cotton maturation, and delayed the start of the harvest by one to two weeks. Serious problems were noted in Henan, Shandong, and Jiangxi provinces, among others. CNCOTTON reported that as of October 22, the cotton harvest was only 54.2 percent complete, down 14.5 percent from last year and almost 17 percent below the 3-yr average. Cotton harvest has now ended in the northern plains, is nearly complete in central China, and will conclude this month in Xinjiang. (*For more information, contact Paulette Sandene at 202-690-0133.*)

China Corn: Higher Estimated Area Boosts Production in 2009 and 2010

China's 2010/11 corn production is estimated at a record 168.0 million tons, up 2.0 million or 1 percent from the previous estimate and up 6 percent from last year's revised crop of 158.0 million.

Area is estimated at a record 31.5 million hectares, up 0.3 million or 1 percent from last year's revised area of 31.2 million hectares. The 2009/10 area revision was based on official data from the National Bureau of Statistics. Farmers reportedly shifted from soybeans to corn in 2009 and 2010 in response to higher relative profits for corn and government policies that favored grain production. The estimated yield of 5.33 tons per hectare is up 5 percent from last year's drought-impacted crop and above the 5-year

 USDA Office of Global Analysis
Foreign Agricultural Service

average. In September, USDA personnel participated in a corn crop tour of Northeast China, an area that suffered from serious drought in 2009. The tour confirmed that the 2010 corn crop was in better condition than last year and yields were expected to increase significantly. Despite abnormally cool and wet spring planting weather and summer flooding in Liaoning and Jilin provinces, favorable summer temperatures boosted yield prospects and fine late-season weather allowed for rapid maturation and harvest. Growing conditions on the North China Plain were generally good, and heavy summer rainfall likely had little impact on corn yields in central and southern China. As a result, national production was expected to increase by about 10 million tons from last year. (*For more information, contact Paulette Sandene at 202-690-0133.*)

This report uses information from the Foreign Agricultural Service's (FAS) global network of agricultural attachés and counselors, official statistics of foreign governments and other foreign source materials, and the analysis of economic data and satellite imagery. Estimates of foreign area, yield, and production are from the International Production Assessment Division, FAS, and are reviewed by USDA's Inter-Agency Commodity Estimates Committee. Estimates of U.S. area, yield, and production are from USDA's National Agricultural Statistics Service. Numbers within the report may not add to totals because of rounding. This report reflects official USDA estimates released in the World Agricultural Supply and Demand Estimates (WASDE-488) November 9, 2010.

Printed copies are available from the National Technical Information Service. Download an order form at http://www.ntis.gov/products/specialty/usda/fas_a-g.asp, or call NTIS at 1-800-363-2068.

The FAS International Production Assessment Branch prepared this report. The next issue of World Agricultural Production will be released after 9:30 a.m. Eastern Time, December 10, 2010.

Yield is on a rough basis, before the milling process

Production is on a milled basis, after the milling process

World and Selected Countries and Regions

TABLE 18

The table below presents a 29-year record of the differences between the November projection and the final estimate. Using world wheat production as an example, changes between the November projection and the final estimate have averaged 5.3 million tons (1.0 percent) and ranged from -18.1 to 7.2 million tons. The November projection has been below the final 20 times and above the final 9 times.

RELIABILITY OF PRODUCTION PROJECTIONS

1/ The final estimate for 1981/82-2008/09 is defined as the first November estimate following the marketing year.

2/ May not total 28 if projection was the same as the final.

3/ Includes corn, sorghum, barley, oats, rye, millet, and mixed grain.
