# World Agricultural Production

## Australia: Excellent Rainfall Raises Prospects of a Record Cotton Crop

Courtesy Mike Darby, US Embassy/FAS Canberra

Precipitation Time Series for Central New South Wales

**Fig 1. Eastern Australia has received above normal spring-summer rainfall resulting in excellent recharge of many irrigation water reservoirs. Prospects are high for increased plantings of both irrigated and dryland cotton.**

Australia's 2010/11 cotton production is forecast at 4.0 million 480-pound bales, up 14 percent from last month, and up 2.25 million or 125 percent from last year. Area harvested is forecast at 560 thousand hectares, up 360 thousand hectares or 180 percent from last year. The yield is forecast at 1555 kg/ha, down 20 percent from last year. Australia is on track for a record cotton crop. Cotton planting is in progress and almost complete in some areas. Most cotton growing regions in New South Wales and Queensland have experienced above-normal winter and spring rainfall resulting in excellent planting conditions, adequate irrigation-water storage and improved farm-gate water allocations. The majority of irrigation reservoirs are at full or over the designed capacity. Recent flooding events in south-central New South Wales are likely to delay plantings. Prospects are high for increased plantings of both irrigated and dryland cotton due to improved water availability and rising cotton prices offered to farmers. Farmers' planting intentions indicate irrigated and dryland cropping areas approaching 350,000 and 200,000 thousand hectares, respectively. The overall yields are projected to decline because a majority of dryland plantings are expanding into areas that have moderate to high variability in rainfall. (*For more information, contact Dath Mita at 202-720-7339.*)

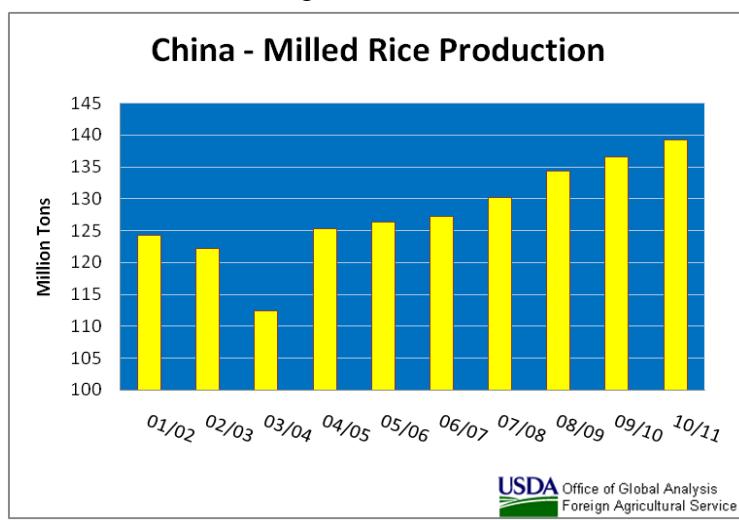

## India: Corn Crop Projected To Be a Record Crop

India's 2010/11 corn production is forecast at a record 21 million tons, up 5 percent from last month, up 4.32 million or 26 percent from last year. The area is forecast at 8.5 million hectares, 4 percent upward from last month, and up 6 percent from last year. The yield is forecast at 2.47 tons per hectare, 1 percent higher than last month and up 18 percent from last year. The current yield is 16 percent more than the five-year average. Roughly, 80 percent of India's corn is produced during the *Kharif* or monsoon season (June-October) and the rest is grown in *Rabi* season (September-April). The 2010 monsoon rainfall was characterized as normal-to-above normal in most of the major corn producing areas of Rajasthan, Karnataka, Madhya Pradesh, Andhra Pradesh, and Gujarat. During the months of June-July, cumulative rainfall was very favorable compared to last year, promoting good crop growth and development. *Kharif* corn harvesting occurs after the rains end in October and is almost complete. The *Rabi* planting is underway. According to the recent planting report released now by the Ministry of Agriculture in India, *Kharif* corn area in August was estimated at 7.2 million hectares compared to 6.88 during the corresponding period last year. *Rabi* plantings continue to show positive progress with approximately 0.32 million hectares planted by the end of August. (For more information, contact Dath Mita at 202-720-7339.)

## China Expected To Produce a Near-Record Rice Crop

China's 2010/11 rice production is estimated at 139.3 million tons (199.0 million, rough basis), up 3.3 million or 2.4 percent from last month and up 2 percent from last year. This is the largest crop since 1997/98, when production reached a record 140.5 million tons. Area is estimated at 29.8 million hectares, up 0.1 million from last month and 0.2 million from last year. Rice area has increased by more than 3.3 million hectares in the past seven years but remains much lower than its historical average of 31.5 million hectares in the 1990's. China's 2010/11 rice yield is

expected to reach a record 6.67 tons per hectare, up 1 percent from last year.

The latest information from the National Bureau of Statistics confirmed that the output of early rice dropped by 1.4 million tons in 2010 due to poor weather during the spring and early summer. However, this loss was more than offset by higher estimated output of late rice and single crop rice. Increased area and very good growing conditions were reported in Northeast China,

particularly in Heilongjiang province, which accounts for about 10 percent of China's single rice crop. Mostly dry and mild weather during October and November favored the maturation and harvest of the late rice crop in southern China. (For more information, contact Paulette Sandene at 202-690-0133.)

## **Canada: Near Record Wheat Yields Boost Production**

The USDA estimates 2010/11 Canadian wheat area at 8.27 million hectares, up 0.15 million or nearly 2 percent from last month, but down 14 percent from last year. Production is forecast at 23.2 million metric tons, up 1.0 million or 4 percent from last month but down 14 percent from last year. Yield is forecast at 2.80 tons per hectare, up 3 percent from last month and up slightly from last year.

The decrease in harvested area is attributed to lower sown area (due to relatively low prices during planting) and above-average early season abandonment in southern Saskatchewan and southern Alberta (due to flooding and wet conditions that impeded planting or drowned seedlings). An overall 3-percent higher than normal abandonment rate is attributed to the flooding and water logged conditions. The wheat crop was able to catch up and mature under ideal growing conditions. Even with late planting, wheat yields reached near record levels, despite a mid-September frost that ended additional development. (*For more information, contact Arnella Trent at 202-720-0881.*)

## **Canada: Rapeseed Production up 8 Percent from Last Year**

The USDA estimates 2010/11 Canadian rapeseed area at 6.50 million hectares, up 0.2 million or 3 percent from last month, and up 2 percent from last year. Production is forecast at 11.9 million metric tons, up 0.9 million or 8 percent from last month but down 4 percent from last year. Yield is forecast at 1.83 tons per hectare, up 5 percent from last month and down 6 percent from last year.

Farmers had strong incentives for planting rapeseed this year due to strong prices. Flooding and water logged conditions drowned seedlings and impeded sowing activities throughout the principal canola producing regions of western Manitoba and Saskatchewan. These provinces, which account for 75 percent of total rapeseed production, received record rainfall and cool temperatures during the planting season. Despite a less than ideal start to the growing season, the rapeseed crop was able to catch up and mature under ideal growing conditions, but September frost ended any additional development. Statistics Canada released their final 2010 *Field Crop Reporting Series* in early December, and reported rapeseed area was significantly higher than the previous estimate in October. The final field survey found that planted area increased by 5 percent in Saskatchewan and by 7 percent in Manitoba but was unchanged from last year in Alberta. (*For more information, contact Arnella Trent at 202-720-0881.*)

This report uses information from the Foreign Agricultural Service's (FAS) global network of agricultural attachés and counselors, official statistics of foreign governments and other foreign source materials, and the analysis of economic data and satellite imagery. Estimates of foreign area, yield, and production are from the International Production Assessment Division, FAS, and are reviewed by USDA's Inter-Agency Commodity Estimates Committee. Estimates of U.S. area, yield, and production are from USDA's National Agricultural Statistics Service. Numbers within the report may not add to totals because of rounding. This report reflects official USDA estimates released in the World Agricultural Supply and Demand Estimates (WASDE-489) December 10, 2010.

**Printed copies are available from the National Technical Information Service. Download an order form at [http://www.ntis.gov/products/specialty/usda/fas\\_a-g.asp](http://www.ntis.gov/products/specialty/usda/fas_a-g.asp), or call NTIS at 1-800-363-2068.**

The FAS International Production Assessment Branch prepared this report. The next issue of World Agricultural Production will be released after 9:30 a.m. Eastern Time, January 12, 2011.

World and Selected Countries and Regions

## TABLE 18

The table below presents a 29-year record of the differences between the December projection and the final estimate. Using world wheat production as an example, changes between the December projection and the final estimate have averaged 4.1 million tons (0.7 percent) and ranged from -10.2 to 6.1million tons. The December projection has been below the final 20 times and above the final 9 times.

### RELIABILITY OF PRODUCTION PROJECTIONS

COMMODITY AND REGION	PROJECTION AND FINAL ESTIMATES, 1981/82 - 2008/09 1/

1/ The final estimate for 1981/82-2008/09 is defined as the first December estimate following the marketing year.

2/ May not total 28 if projection was the same as the final.

3/ Includes corn, sorghum, barley, oats, rye, millet, and mixed grain.
