U.S. Soybean Meal Hits 10-Year High for Export Sales

U.S. Soybean Meal New Marketing Year (NMY) Sales

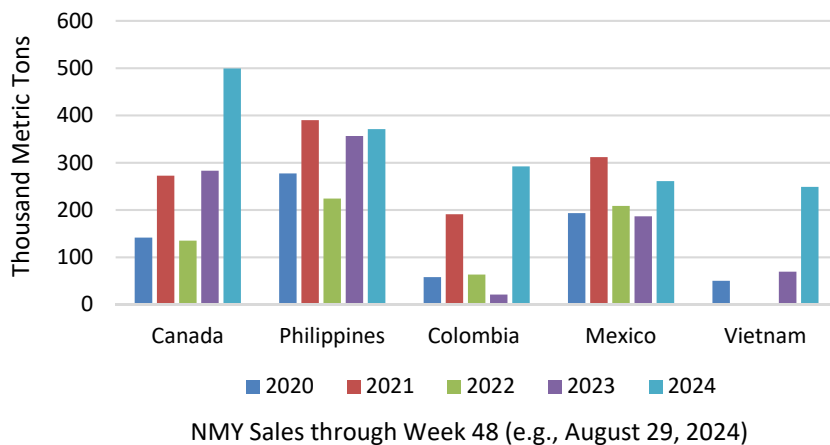

Source: USDA Export Sales Reporting Program

2024/25 U.S. soybean meal exports are projected at a record of nearly 16.0 million tons driven by record crush. Higher supplies and competitive prices are further driving the volume of export sales for the new marketing year. As of August 29, 2024, U.S. soybean meal sales for marketing year 2024/25 (Oct-Sept) have reached a 10-year high compared to the same period in previous years.

2024/25 sales to Canada, the Philippines, and Colombia remain strong, growing to nearly 1.2 million tons. Canada is the leading destination for exports sales by volume, with a year-over-year increase of 76 percent. The Philippines and Colombia have the second and third highest level of sales, followed by Mexico. Vietnam is an

emerging market in the new marketing year, with sales confirmed at nearly 250,000 tons. Colombia has significantly outpaced their 2023/24 purchases; export sales rose from 21,000 to 292,100 tons. The United States is expected to remain the third largest exporter of soybean meal in 2024/25 driven by competitive prices and high stocks, maintaining 21 percent of the global soybean meal market.

U.S. Soymeal NMY Sales - Top Markets

OVERVIEW 2024/25

The global oilseeds production forecast is lowered over 3.1 million tons to 687.4 million this month on lower EU rapeseed and lower Ukraine and EU sunflowerseed. Oilseeds trade is unchanged as higher soybean exports from Paraguay are offset by declines in global rapeseed and sunflowerseed exports. Oilseeds ending stocks are forecast over 500,000 tons higher on greater Canada rapeseed and Argentina soybeans. Global crush is lowered nearly 1.7 million tons on reduced sunflowerseed utilization in Ukraine and the EU. Global meal trade is reduced over 500,000 tons on lower sunflowerseed meal. Global vegetable oil trade is unchanged.

The projected U.S. season-average farm price for soybeans is unchanged at \$10.80 per bushel.

OVERVIEW 2023/24

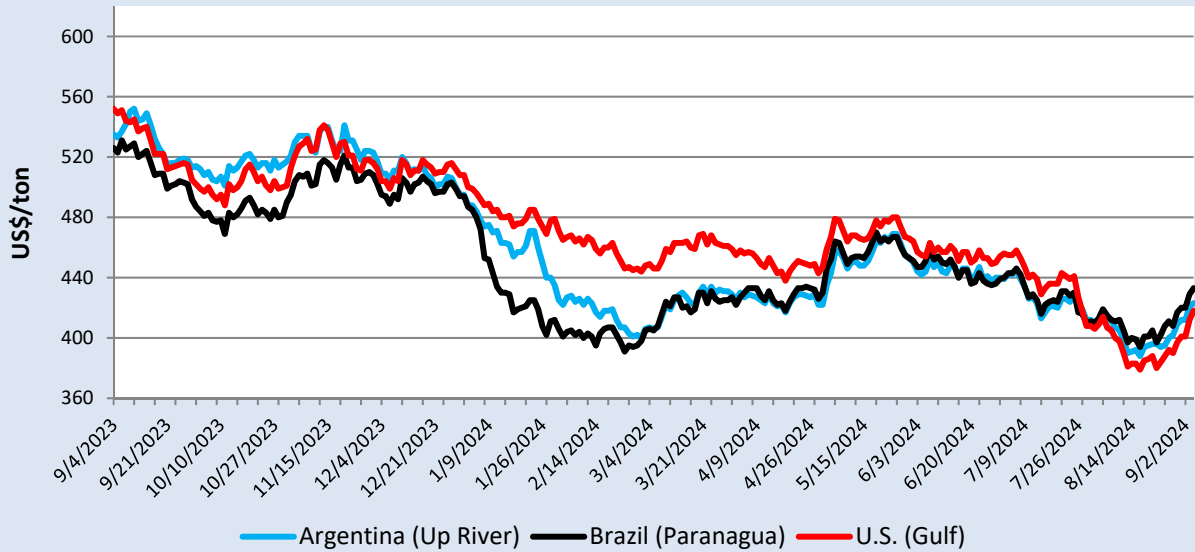

The global oilseeds production estimate is raised almost 400,000 tons on higher rapeseed production in Canada. Global oilseeds trade is increased 800,000 tons on greater soybean exports from Paraguay. Global oilseeds ending stocks are raised 1.9 million tons on higher rapeseed carryout in Canada and China. Global oilseeds crush is raised over 700,000 tons primarily on higher soybean utilization in Egypt and Turkey. Global meal trade is increased almost 700,000 tons on higher soybean meal exports from Brazil. Global vegetable oil trade is reduced almost 300,000 tons on lower palm oil shipments from Indonesia.

The projected U.S. season-average farm price for soybeans is unchanged at \$12.50 per bushel.

EXPORT PRICES

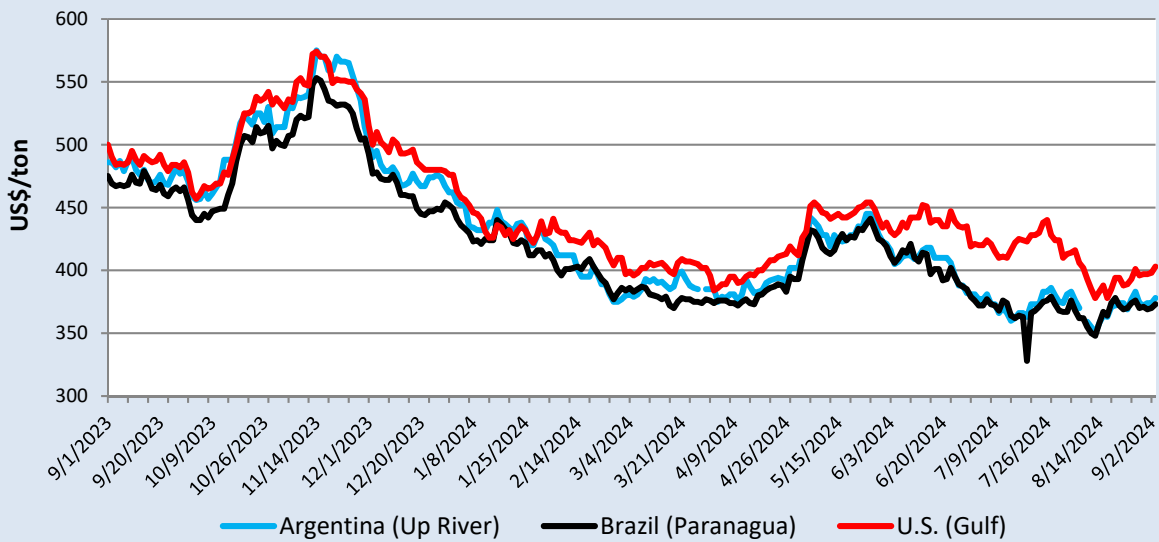

Global soybean prices fell following the August 12, 2024 NASS Crop Production and Stocks report which called for record 2024/25 U.S. production. Surplus supply expectations sent prices of U.S. soybeans lower than soybeans in Brazil and Argentina for the first time since December 2022. Robust supplies and lower prices triggered higher sales of U.S. soybeans. These factors coupled with concerns about weather at harvest in the Northern Hemisphere and planting conditions in the Southern Hemisphere have led to a rebound in prices by the end of the month. Soybean meal prices declined along with soybean prices. Competitive prices of U.S. soybean meal have resulted in 10-year highs for U.S. export sales. Prices of U.S. soybean oil remained low last month due to weaker demand and competition from other vegetable oils and biofuels feedstocks including used cooking oil. Prices of soybean oil in Argentina have dropped due to seasonally large crush volumes. EU and Black Sea rapeseed and sunflower complex prices have risen due to a lower production outlook.

OTHER NOTES

Marketing Years (MY): MY refers to the 12-month period at the onset of the main harvest, when the crop is marketed (i.e., consumed, traded, or stored). The year first listed begins a country's MY for that commodity (2022/23 starts in 2022); except for oilseeds in certain Southern Hemisphere countries,

where the second year begins the MY (2022/23 starts in 2023). For a complete list of local marketing years, please see the FAS website (<https://apps.fas.usda.gov/psdonline/>): go to Reports, Reference Data, and then Data Availability.

Stocks: Unless otherwise stated, stock data are based on an aggregate of differing local marketing years and should not be construed as representing world stock levels at a fixed point in time.

Consumption: World totals for consumption reflect total utilization, including food, seed, industrial, feed, and waste; as well as differences in local marketing year imports and local marketing year exports. Consumption statistics for regions and individual countries, however, reflect food, seed, industrial, feed, and waste only.

Trade: All PSD tables are balanced on the different local marketing years.
