## Indonesia B40 Implementation Expected to Curb Exports

On January 3, 2025, the Indonesia Ministry of Energy and Mineral Resources decreed 15.6 million kiloliters of biodiesel to be included in the domestic fuel pool, raising the blend rate for biodiesel from 35 to 40 percent. The measure has an implementation period through February 28 that will give industry time to adopt to the higher inclusion requirement. This policy change is expected to increase Indonesia's industrial palm oil consumption by approximately 1.0 million metric tons from the prior year to a record of 14.5 million tons in 2024/25. Consequently, this increase in domestic consumption is expected to reduce the amount of palm oil available for export.

According to the Indonesia Ministry of Energy and Mineral

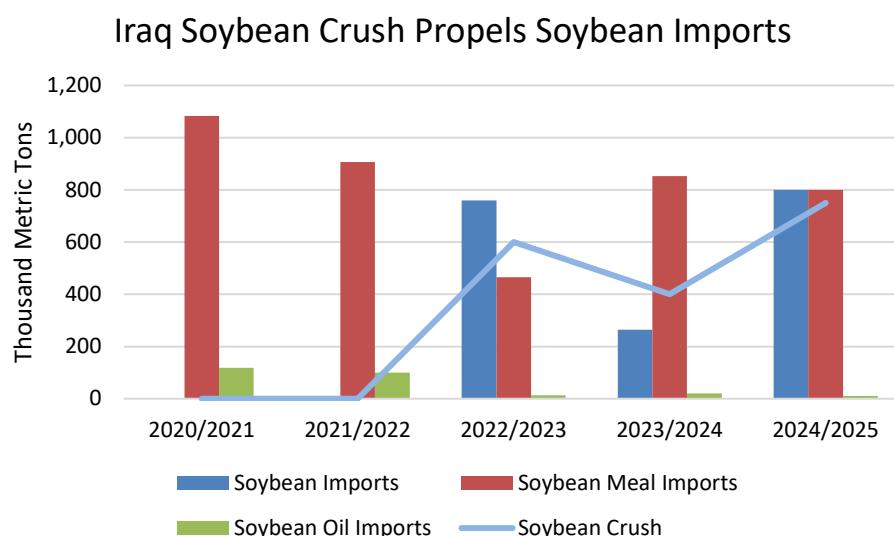

Resources, 48 percent of the biodiesel allocation is set aside for the public service obligation, which covers utilization by government entities like public transportation. Biodiesel allocated to the public service obligation will be subsidized by the funds raised by the palm oil export levy. The remaining biodiesel will be sold at market rates. Palm oil prices are holding at multi-year highs, and the fiscal demands on the Indonesia palm oil fund will be significant.

2024/25 is expected to be a record year for Indonesia palm oil production, largely on gains in harvested area. Despite record production, exports are expected at nearly the lowest level in a decade. The anticipated increase in domestic consumption from B40 adoption will push the percentage of palm oil production exported to fall to 52 percent, the second lowest level in 25 years. Lower available supplies for export has fueled gains in palm oil prices, helping to propel palm oil to its position as the highest priced vegetable oil in recent months. Vegetable oil importers across the globe have started shifting to lower-priced oils, including soybean oil from the United States.

## Iraq Emerges as a Soybean Importer

After decades of relying on imported soybean meal to meet feed demand, Iraq emerged as a soybean importer in recent years. In 2023, Iraq built a soybean crushing facility at the southern Umm Qasr Port. The World Bank's International Finance Corporation financed its construction, and the project also included warehouses to store both corn and soybeans. The new facility has a crushing capacity of around 3,000 tons per day, which is nearly sufficient to meet domestic soybean meal demand if operating at peak output.

This month, USDA's Production, Supply and Distribution database was expanded to include soybeans and soybean oil balance sheets for Iraq starting in marketing year 2015/2016. USDA had maintained soybean balance sheets for Iraq from 1973/74 and

1984/85, a period in which annual soybean imports averaged 17,000 tons. In 2022/23, Iraq imported 760,000 tons of soybeans, marking the first substantial trade volume in decades. The United States and Brazil are the primary suppliers of Iraq's imports, and none are produced domestically. Soybean meal and soybean oil imports have declined in line with growth in domestic production of these products. Exports of soybean oil to India were reported in 2022/23 and 2023/24.

In 2024/25, Iraq soybean imports are forecast at 800,000 tons. Marketing year-to-date (Oct-Dec), Iraq imported 460,000 tons, including 118,000 tons from the United States, showing a strong start to the year.

### DATA SERIES REVISIONS

#### China Rapeseed

China rapeseed production was revised to align with data published by China's National Bureau of Statistics for 2010/11 through 2022/23. The production forecast for 2023/24 was also adjusted lower after incorporating these revisions. In line with the changes, rapeseed utilization and stocks – including crush and rapeseed meal and oil consumption – have been adjusted for these years.

## **OVERVIEW 2024/25**

The global oilseeds production forecast is down 3.0 million tons to 680.4 million this month on lower U.S. soybean, and India and Russia rapeseed, not offset by an increase in China cottonseed production. Oilseeds trade remains unchanged at 207.3 million tons, with higher Canada rapeseed exports offsetting lower rapeseed exports by Australia, Ukraine, and Uruguay. Oilseeds ending stocks are lowered 2.9 million tons to 144.3 million on lower U.S. and Brazil soybean stocks despite higher China rapeseed ending stocks. Global crush is raised over 2.0 million tons to 560.3 million on higher Brazil soybean crush and the addition of the Iraq soybean balance sheet. Global meal trade is up over 300,000 tons to 107.4 million on higher Brazil soybean meal exports despite lower Russia rapeseed meal exports. Global vegetable oil trade is up slightly to 86.4 million tons with higher U.S. soybean oil and Russia sunflowerseed oil, not offset by lower Russia rapeseed oil exports.

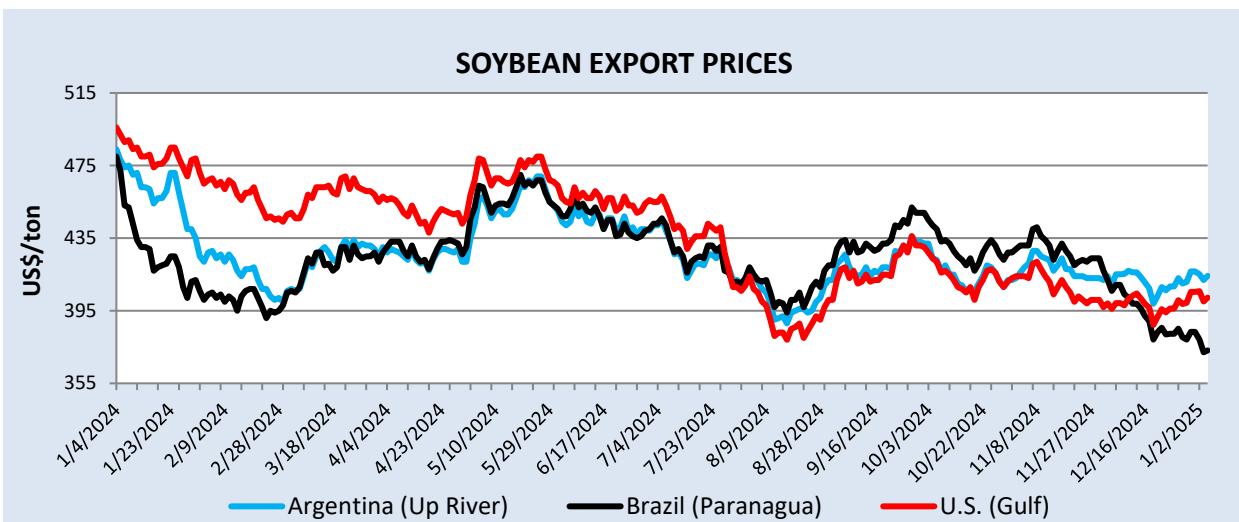

The projected U.S. season-average farm price for soybeans is unchanged at \$10.20 per bushel.

## **EXPORT PRICES**

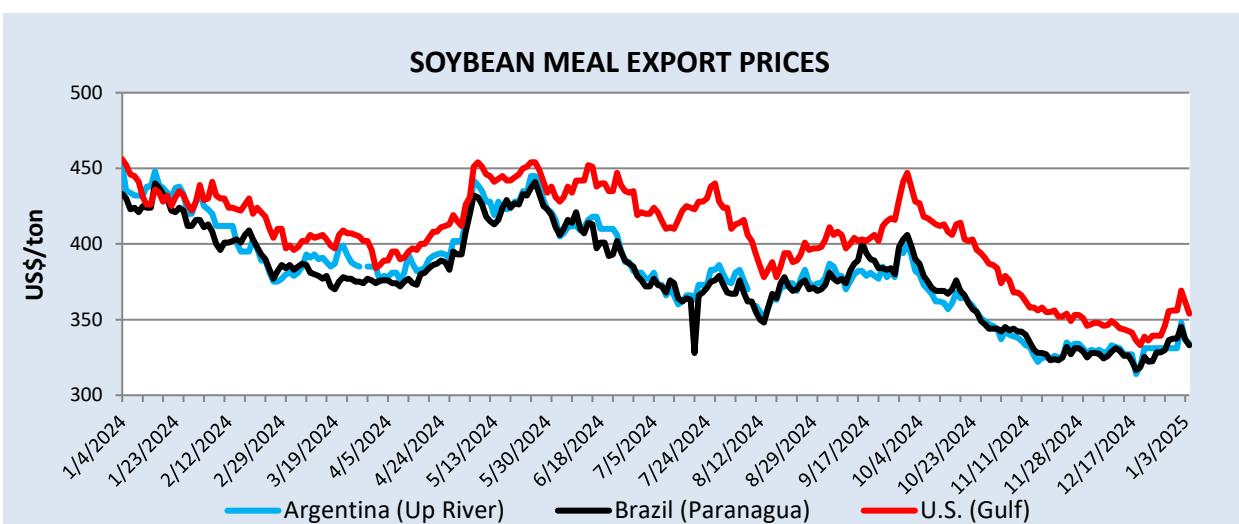

Since the last WASDE report, soybean export prices from Argentina and the United States increased, while Brazilian soybean prices fell. Brazilian soybean prices diverged from competitors on favorable rains and a weakening exchange rate that pressured prices in the last weeks of 2024, and are below U.S. prices for the first time since July 2024. Soybean meal prices from major origins rose on concerns about current dry weather in Argentina.

Soybean oil prices also declined since the last WASDE report, in part due to a record U.S. daily crush rate in November and uncertainty about the 45Z Clean Fuel Production Credit, which was scheduled to be implemented January 1, as guidance has yet to be released from the Treasury Department. These factors helped U.S. soybean oil maintain its status as the global discount oil and boosted export sales.

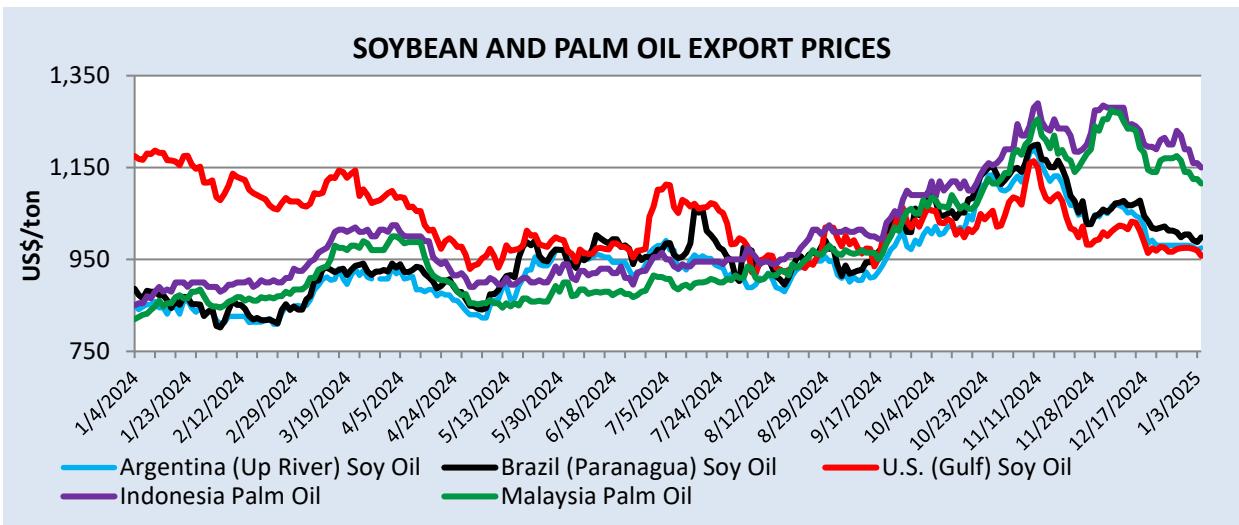

Palm oil prices also retreated during the last month on weakened demand. Indonesia's recent announcement to increase the biofuel allocation allayed uncertainty surrounding palm oil availability, also causing prices to tick down.

## OTHER NOTES

Marketing Years (MY): MY refers to the 12-month period at the onset of the main harvest, when the crop is marketed (i.e., consumed, traded, or stored). The year first listed begins a country's MY for that commodity (2022/23 starts in 2022); except for oilseeds in certain Southern Hemisphere countries, where the second year begins the MY (2022/23 starts in 2023). For a complete list of local marketing years, please see the FAS website (<https://apps.fas.usda.gov/psdonline/>): go to Reports, Reference Data, and then Data Availability.

Stocks: Unless otherwise stated, stock data are based on an aggregate of differing local marketing years and should not be construed as representing world stock levels at a fixed point in time.

Consumption: World totals for consumption reflect total utilization, including food, seed, industrial, feed, and waste; as well as differences in local marketing year imports and local marketing year exports. Consumption statistics for regions and individual countries, however, reflect food, seed, industrial, feed, and waste only.

Trade: All PSD tables are balanced on the different local marketing years.
