## European Union Soybean Meal Imports to Reach 9-Year High

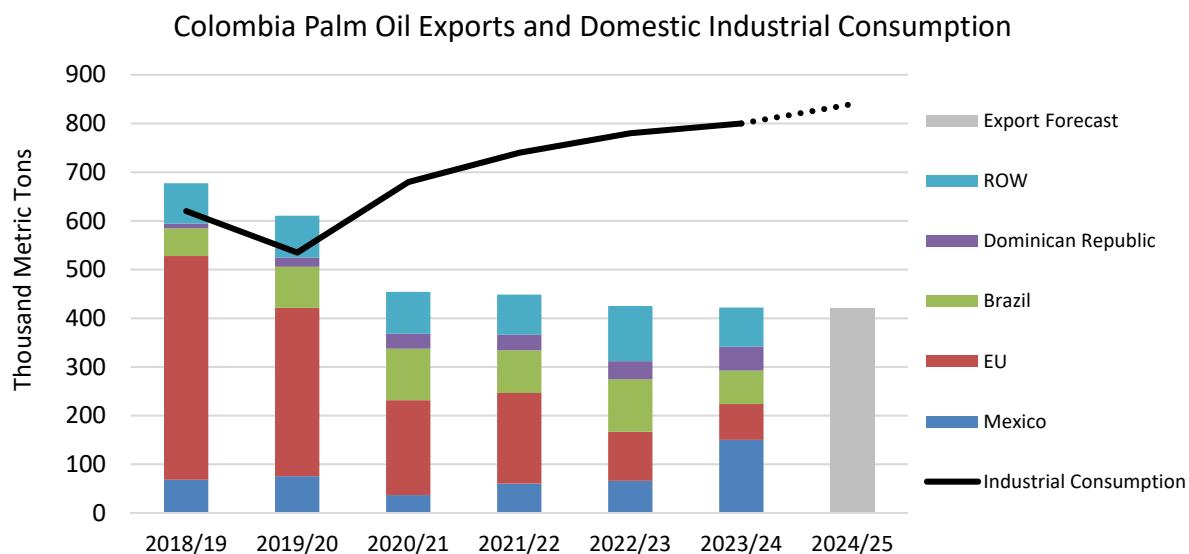

The European Union soybean meal import forecast for 2024/25 (October-September) is raised 1.0 million metric tons (tons) to 17.6 million. First quarter imports were the highest in over a decade, reaching nearly 6.0 million tons. Soybean meal is largely imported from Brazil and Argentina, with additional volumes in recent years coming from the United States, Ukraine, and Paraguay. Based on export data for Brazil and Argentina, the European Union imported at least 2.4 million tons across January and February, indicating a strong pace during the first 5 months of the marketing year. Soybean meal export prices are approaching 5-year lows, driven by large global soybean supplies and increased soybean crush in producer countries including Brazil, Argentina, and the United States. 2024/25 EU soybean meal consumption is forecast to offset a reduction in consumption of rapeseed meal and sunflower meal, both of which are in shorter supply due to reduced 2024/25 global production. Imports of soybeans and domestic soybean crush are expected to grow this year despite high soybean meal imports.

## Growing Biodiesel Demand Curbs Colombia Palm Oil Exports

Colombia is the world's fourth largest palm oil producer at nearly 2.0 million tons, accounting for 4 percent of global output. In 2024/25 (October-September), Colombia is projected to export 420,000 tons of palm oil, down from last year as first quarter exports were behind last year's pace. According to FAS Bogota, the Colombia biodiesel blend rate has been increasing steadily since 2015 and is estimated at 12.5 percent in 2024. Higher blending is supported by voluntary programs that allow up to 20 percent biodiesel in cargo vehicles ([GAIN Report](#)).

Palm oil area and production continued to rise in recent years, though exports plateaued at an average of 440,000 tons as domestic demand for biodiesel has gone up each year. Exports as a percentage of production declined from over 40 percent in 2018/19 to a little over 20 percent in 2023/24. While

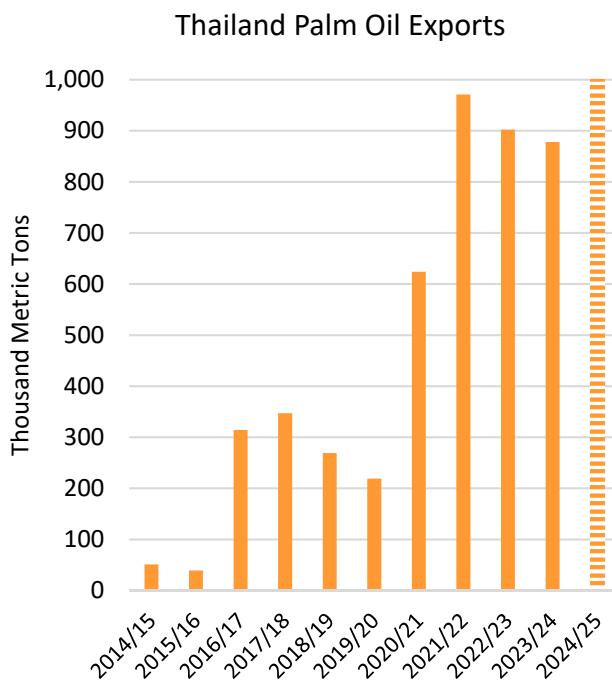

growth slowed in the last 4 years, destinations for Colombia palm oil exports shifted. Colombia expanded market share in Mexico likely due to declining rapeseed oil imports from Canada. Meanwhile, market share declined in the EU due to falling consumption of palm oil.

### Thailand Palm Oil Exports Stabilize Following Decade-Long Growth

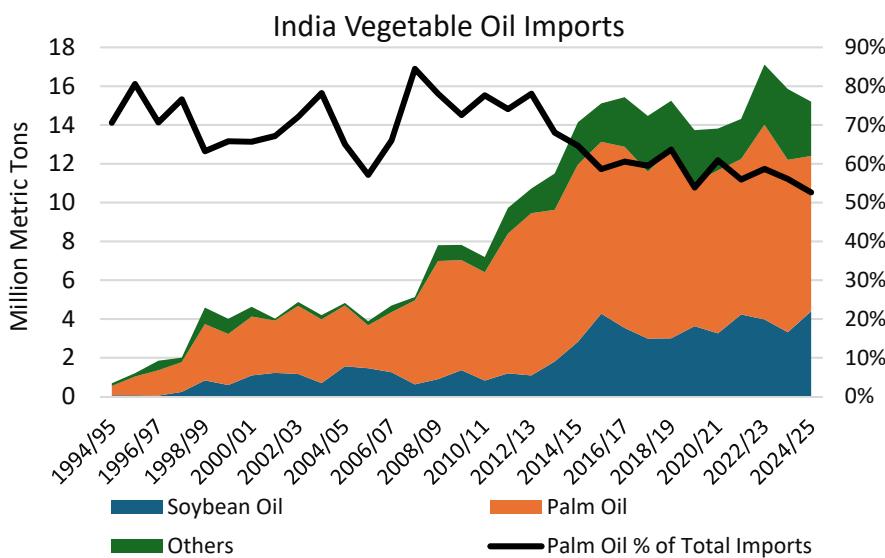

As the third largest palm oil producer behind Indonesia and Malaysia, Thailand accounts for 5 percent of global output. In the past decade, Thailand grew palm oil production by 80 percent on higher planted acreage of oil palm trees.

In the same decade, Thailand boosted palm oil exports twenty-fold to 800,000 metric tons. Thailand's exports of palm oil as a percentage of production grew to an average of 22 percent in the past 5 years, up from 8 percent during 2016-2020. Purchases from India propelled Thailand palm oil exports as India accounted for 80 percent of Thailand's exports since 2017. Competitiveness of palm oil prices for export to India will be a key factor in Thailand's palm oil export potential throughout 2025 as India looks toward lower-cost alternatives.

## Pricey Palm Oil Propels Alternate Oil Imports in India

This month, 2024/25 (October-September) India imports of palm oil were lowered 900,000 to 8.0 million tons, while estimates for sunflowerseed and soybean oil imports were raised. High palm oil prices prompted refiners to switch from crude palm oil to more cost-effective crude sunflowerseed and soybean oil. Soybean oil imports are estimated at a record high, exceeding the previous peak in 2014/15. These shifts bring palm oil down to just over half of India's total oil imports, a remarkable decline from its previous market share dominance. India is the largest global importer of vegetable oils. Its imports shift depending on prices. In January 2025, U.S. monthly soybean oil exports to India reached near 3-year highs as U.S. soybean oil prices were competitive globally.

### Data Revision

#### Australia Rapeseed

Australia rapeseed, rapeseed meal, and rapeseed oil are revised back through 2008/09. The marketing year was shifted from December-November to November-October. This reflects Australian Bureau of Agricultural and Resource Economics and Sciences (ABARES) data for the Australia rapeseed crop year.

### OVERVIEW 2024/25

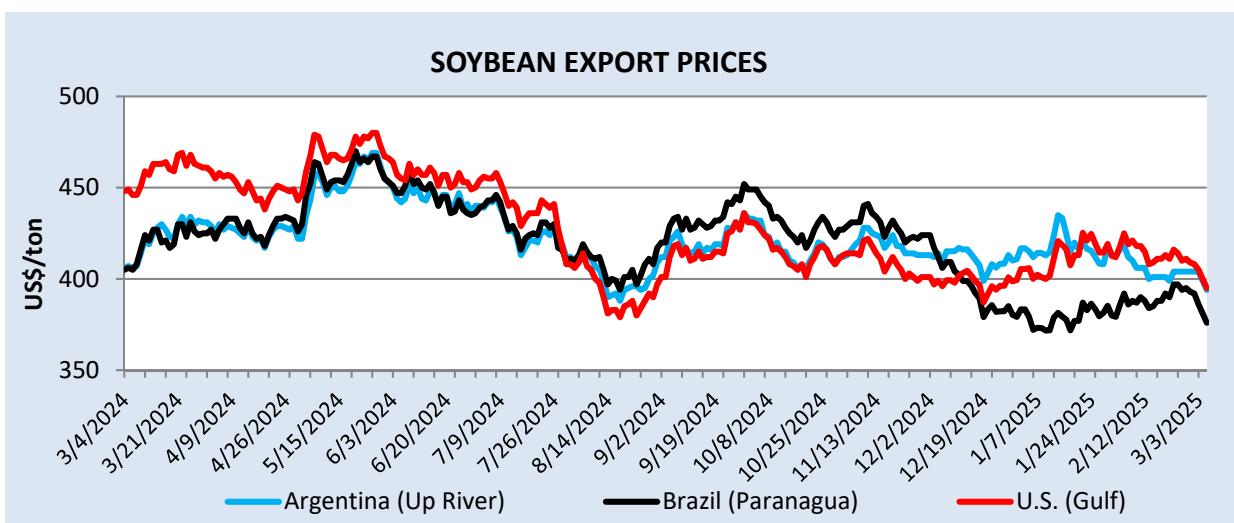

The global oilseeds production forecast is up around 2 million tons to 680 million this month on higher Ukraine and Russia sunflowerseed, Australia rapeseed, China cottonseed, and Brazil peanut. Oilseed trade is raised slightly to 208 million on higher Australia rapeseed and Canada soybean, despite a decrease in South Africa soybean trade. Oilseed ending stocks are lowered nearly 1 million tons to 139 million on reduced China and Argentina soybean stocks which more than offset higher China and EU rapeseed as well as Russian sunflower ending stocks. Global crush is up around 2 million tons to 563 million tons on higher China and Argentina soybean, Ukraine sunflowerseed, and United Arab Emirates rapeseed crush despite lower China rapeseed and cottonseed crush. Global meal trade is up over 1.5 million tons to 110 million on higher Argentina, Ukraine, and China soybean meal exports.

The projected U.S. season-average farm price for soybeans is decreased 15 cents to \$9.95 per bushel.

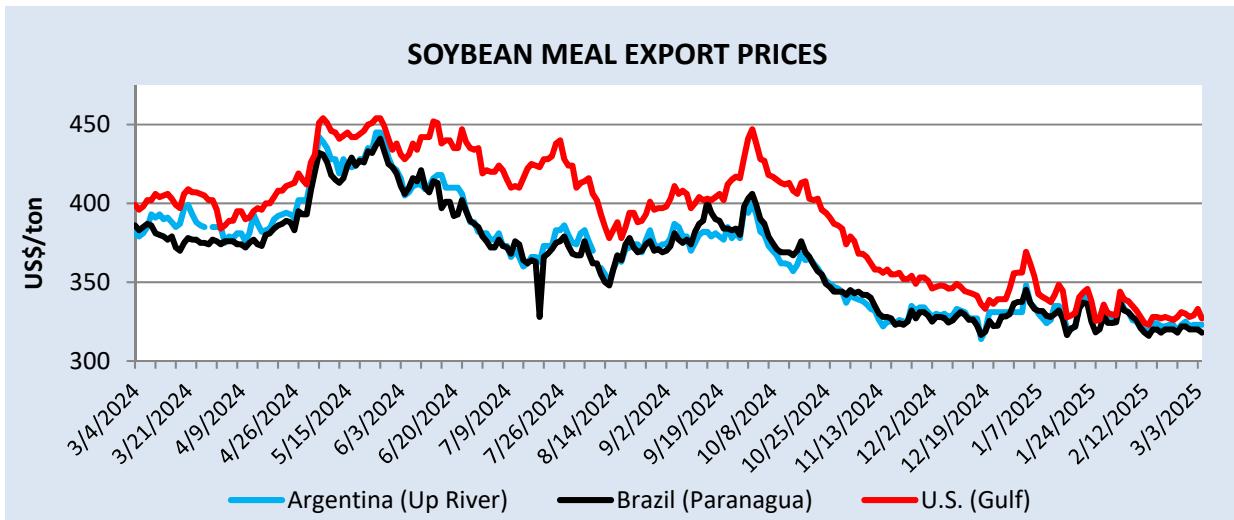

## EXPORT PRICES

Since the last WASDE report, soybeans have had little price movement despite a drop in prices on March 3, caused by tariff concerns. Prior to this drop, an anticipated surplus in global production balanced with unfavorable weather in South America kept prices consistent throughout most of the month. Brazil soybeans have remained the most price competitive all month. Global soybean meal prices tracked with soybean prices. Soybean crushing continues to remain high and consumers are switching to competitively priced soybean oil as the global supply of palm oil continues to tighten.

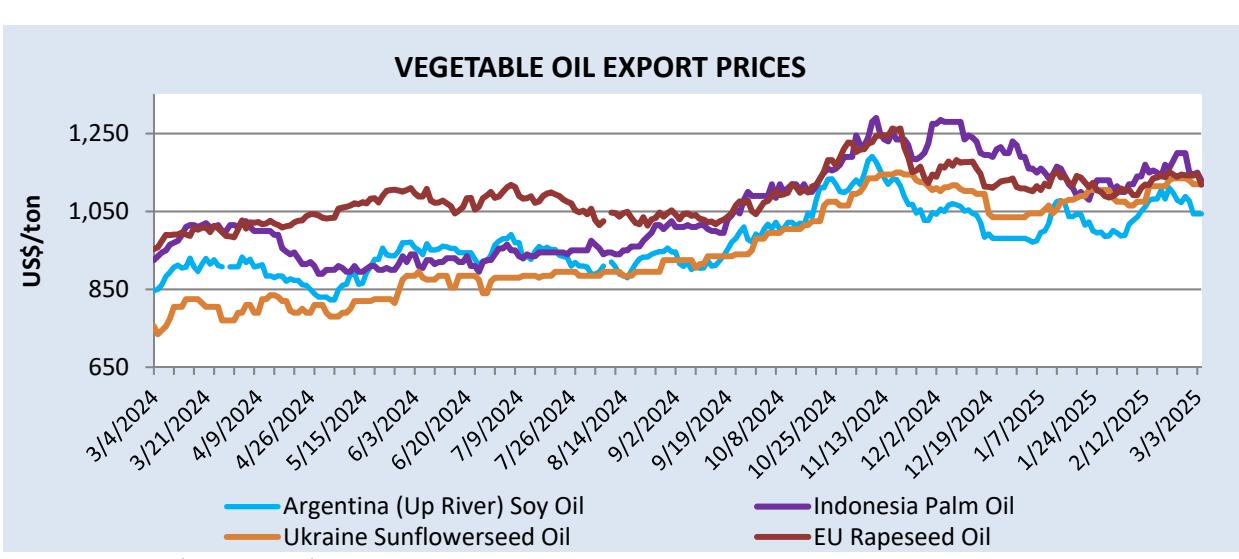

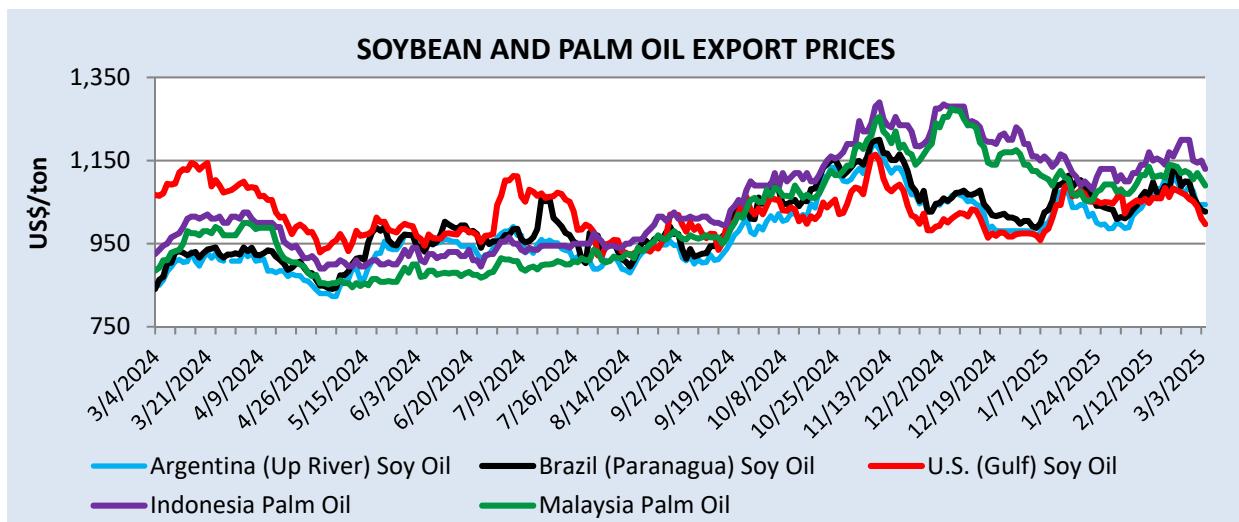

Lower palm oil production in Malaysia and declining exports from Indonesia kept global palm oil prices high relative to other vegetable oils throughout much of the last month. While global palm oil prices were strong, global soybean oil prices started to diverge in late February due to declining crude oil prices and high global soybean oil stocks. Sunflowerseed and rapeseed oil prices remain high relative to soybean oil due to lower crop supplies.

## OTHER NOTES

Marketing Years (MY): MY refers to the 12-month period at the onset of the main harvest, when the crop is marketed (i.e., consumed, traded, or stored). The year first listed begins a country's MY for that commodity (2022/23 starts in 2022); except for oilseeds in certain Southern Hemisphere countries, where the second year begins the MY (2022/23 starts in 2023). For a complete list of local marketing years, please see the FAS website (<https://apps.fas.usda.gov/psdonline/>): go to Reports, Reference Data, and then Data Availability.

Stocks: Unless otherwise stated, stock data are based on an aggregate of differing local marketing years and should not be construed as representing world stock levels at a fixed point in time.

Consumption: World totals for consumption reflect total utilization, including food, seed, industrial, feed, and waste; as well as differences in local marketing year imports and local marketing year exports. Consumption statistics for regions and individual countries, however, reflect food, seed, industrial, feed, and waste only.

Trade: All PSD tables are balanced on the different local marketing years.
