

Oilseeds: World Markets and Trade

Rising Brazil Biodiesel Production Hampers Soybean Oil Exports

Rising biodiesel mandates in Brazil continue to redirect soybean oil into the domestic fuel market, reducing exportable supplies. Over the last decade, industrial soybean oil consumption more than doubled. This trend has encouraged soybean crush expansion, leading to a 52-percent gain in soybean oil production. Rising domestic demand exceeded production growth, leading to a slide in exports of soybean oil.

In 2024/25 (October-September), Brazil soybean oil output is projected at a new record of nearly 12.0 million metric tons (tons) while exports are forecast at 1.3 million tons. Industrial consumption is expected to remain strong despite Brazil National Energy Council's decision in February 2025 to temporarily keep the biodiesel blend rate at 14 percent, citing rising diesel prices and inflation concerns. The blend rate had been scheduled to rise to 15 percent in March 2025. Further growth in Brazil's biodiesel production is likely to keep soybean oil exports near last year's level despite higher crush.

In the last few years, growing global demand for vegetable oils has driven higher output of rapeseed and sunflowerseed oil, meanwhile palm oil production growth has slowed. Although global palm oil output is projected to increase slightly in 2024/25, exportable supplies are forecast to tighten due to the anticipated expansion in use for Indonesia biodiesel. Shrinking exportable supplies of Brazilian soybean oil and palm oil in Indonesia, Malaysia, and Thailand have kept global vegetable oil export prices elevated in early 2025. A larger Argentina soybean crop and increased crush may limit further growth in prices, but the strong global demand for vegetable oils coupled with relatively tight exportable supplies is expected to keep prices elevated through the end of the marketing year.

Strong China Rapeseed Imports Ahead of Rising Tariffs

China rapeseed imports for marketing year 2024/25 (October-September) are raised 1.0 million metric tons (tons) to 4.0 million tons in response to the accelerated pace of trade to date. In recent months, Canadian canola prices fell as a result of an ongoing trade dispute with China, the largest trade partner for Canadian rapeseed. On the other hand, the forecast for rapeseed meal imports is slashed 800,000 tons to 2.2 million in response to China's 100-percent tariff on Canadian rapeseed products, imposed on March 20, 2025. China rapeseed oil imports are unchanged at nearly 1.8 million as China mainly relies on imports from Russia, United Arab Emirates, Belarus, and Ukraine.

OVERVIEW 2024/25

Global oilseed production is lowered on downward revisions to the China cottonseed-to-lint ratio and reduced EU rapeseed and sunflowerseed production. Oilseed trade is higher on significant Canada rapeseed exports. Global crush is increased with Brazil soybean and China rapeseed utilization most prominent. Global oilseed carryout is higher, largely on an upward revision to 2023/2024 Brazil soybean production. USDA reviewed 2024 Brazil disappearance data which led to the higher production estimate. Disappearance data includes variables such as trade, crush, seed and residual use, and stocks. While stocks at the end of the local year (December 2024) were reduced, stocks at the end of the marketing year (September 2024) were raised. In the USDA FAS Production, Supply, and Distribution (PSD) database, the local year (January-December) is denoted as "Oilseed, Soybean (Local)" and the marketing year (October-September) is "Oilseed, Soybean."

Global protein meal trade is increased on higher shipments of soybean meal from Brazil and Argentina, more than offsetting lower Canada rapeseed meal exports. Global vegetable oil production is lower on reduced palm oil production in Southeast Asia. Global vegetable oil trade and stocks are also lower on reduced palm oil.

The projected U.S. season-average farm price for soybeans is unchanged at \$9.95 per bushel.

EXPORT PRICES

Since the last WASDE report, soybean prices are little changed. Similar to last month, prices dropped at the beginning of April in response to new tariff announcements. Brazil soybeans remained the most price competitive origin for the first half of March, but since rallied due to increasing demand from China and other trading partners. Global soybean meal prices generally tracked with soybeans.

U.S. soybean oil prices have strengthened relative to South American soybean oil with a pronounced rally at the beginning of April, likely caused by domestic biofuel announcements. Lower palm oil production in Malaysia and declining exports from Indonesia continue to keep global palm oil prices at a premium relative to other vegetable oils. Tight supplies of Ukraine sunflowerseed and EU rapeseed supported higher prices for these oils.

OTHER NOTES

Marketing Years (MY): MY refers to the 12-month period at the onset of the main harvest, when the crop is marketed (i.e., consumed, traded, or stored). The year first listed begins a country's MY for that commodity (2022/23 starts in 2022); except for oilseeds in certain Southern Hemisphere countries, where the second year begins the MY (2022/23 starts in 2023). For a complete list of local marketing years, please see the FAS website (<https://apps.fas.usda.gov/psdonline/>): go to Reports, Reference Data, and then Data Availability.

Stocks: Unless otherwise stated, stock data are based on an aggregate of differing local marketing years and should not be construed as representing world stock levels at a fixed point in time.

Consumption: World totals for consumption reflect total utilization, including food, seed, industrial, feed, and waste; as well as differences in local marketing year imports and local marketing year exports. Consumption statistics for regions and individual countries, however, reflect food, seed, industrial, feed, and waste only.

Trade: All PSD tables are balanced on the different local marketing years.
