

Oilseeds: World Markets and Trade

Global Soybean Trade Slows on Weaker China Demand

Global soybean trade has slowed in recent weeks. While trade had been matching last year's strong pace earlier in the year, June trade volumes are estimated to fall 3.6 million tons below last year. With China demand a major driver, the weakening export pace can be attributed to a softening in China purchases. Soybean stocks in China, already at high levels, continue to grow as earlier imports exceeded the monthly crush pace. Large pork supplies have dragged pig prices lower, reducing feed margins and lowering soybean meal demand at least in the short term. With large soybean supplies on hand, and markets offering lower prices for shipments in the last quarter of the year, lower global soybean shipments are expected over the next 3 months and prior to the U.S. harvest.

While this led to the lower export forecasts for Brazil and Argentina this month for the 2020/21 Oct/Sep trade year, it also portends higher available supplies for export from South America in the latter half of 2021. Larger availability in South America for the October-December period would normally cut U.S. exports and pressure U.S. prices lower. However, price levels later in the year will depend more on actual U.S. soybean yields and production. Market volatility has been high as markets react to acreage projections and weather models much more than weak global demand.

Over the last 30 days, contract prices have ranged nearly \$1.00 per bushel either side of current quotes. Prices declined roughly \$2.00 per bushel from early June as rain soaked parts of the Corn Belt, only to give back much of the decline on limited acreage gains reported in the June USDA *Acreage* report. But with weather models showing more rain for some of the drier regions of the upper Midwest, November contract prices quickly shaved 80 cents per bushel off these highs, settling near \$13.20 per bushel on July 9. This is about 50 cents per bushel below the August contract.

MARKET FEATURE

EU Palm Oil Imports Slow in 2021 Despite Consumption Growth

EU palm oil imports were a record 7.1 million tons in 2020. High import volumes outpaced consumption growth, itself driven by the expansion of Italy biofuel production and higher production of soaps and detergents during the COVID-19 pandemic, leading to record stocks of over 1 million tons. However, through the first 4 months of 2021, EU palm oil imports are down nearly 30 percent from record 2020 imports and more than 20 percent down from the 5-year average, despite forecast consumption growth for the year. Stocks are likely being utilized to meet consumption needs as palm oil prices in early 2021 reached near-decade-level highs. Based on EuroStat trade data, EU palm oil import unit values during the first 4 months of 2021 were over 20 percent higher than the same period last year. Palm oil imports are forecast to recover closer to the 5-year average in the second half of the year as stocks tighten and as palm oil prices have trended lower since May.

India Reduces Duties on Crude and Refined Palm Oil Imports to Lower Domestic Edible Oil Prices

Effective June 30, India's Central Board of Indirect Taxes and Customs (CBIC) reduced import duties on crude and refined palm oil. The reduction is from 15 to 10 percent for crude palm oil, and from 45 to 37.5 percent for refined palm oil. Tariff reductions are an effort by the Indian government to lower domestic prices of edible vegetable oils. The changes will be in effect until September 30, 2021.

The lower duties are expected to boost palm oil imports and support global palm oil prices. As a result, India palm oil imports are raised 150,000 tons to 8.6 million tons in 2020/21 and by 100,000 tons to 8.4 million tons in 2021/22.

Share of India Vegetable Oil Consumption, 2019/20

■ Palm ■ Soybean ■ Sunflowerseed ■ Other

Palm oil is the largest consumed vegetable oil in India but represents a disproportionate share of imports. In 2019/20, India imported 7.4 million tons of palm oil, over half of total vegetable imports. India also produces substantial amounts of rapeseed, soybean, cottonseed, and peanut oil. In 2019/20 India consumed 8.5 million tons of palm oil.

PROJECTION FOR 2021/22

Global 2021/22 oilseed production is forecast at 635 million tons, up 3 million from June. Oilseed imports are down slightly and exports are little changed overall. Global production of protein meals is up 1 million tons and oils up nearly 1 million tons on higher crush, primarily sunflower and soybean seed. The projected U.S. season-average farm price for soybeans is down 15 cents to \$13.70 per bushel.

PROJECTION FOR 2020/21

Global 2020/21 oilseed production is forecast at 600 million tons, down slightly from June. Oilseed exports are down 6 million tons from June primarily on lower soybean exports from Brazil, Argentina, and the United States. Oilseed crush is up slightly on increased peanut and rapeseed crush. Global oilseed stocks are up more than 3 million tons primarily on larger Brazil and Argentina soybean stocks more than offsetting lower China stocks.

Global protein meal production and meal trade volumes are mostly unchanged, and stocks are up fractionally. Global vegetable oil production and trade volumes are up marginally, while ending stocks are mostly unchanged. The projected U.S. season-average farm price for soybeans is down 20 cents to \$11.05 per bushel.

EXPORT PRICES

June 2021 Soybean Export Prices

	U.S.	Argentina	Brazil
June Avg Price	\$567/ton	\$526/ton	\$542/ton
Change vs May	- \$40/ton	- \$30/ton	- \$24/ton

Export prices for the three largest soybean exporters fell in June due primarily to rainfall in the Midwest, lower soybean oil prices, and softer U.S. crush demand. However, the release of updated USDA acreage and stocks estimates led to a jump in prices in early July as U.S. soybean plantings came in lower than industry expectations.

Meal prices declined throughout June, reflecting a softening in soybean prices. Like soybeans, meal prices also jumped in early July following the updated USDA data.

For the first time in over a year, average monthly soybean and palm oil export prices fell across the board. Soybean oil prices plummeted in the middle of June tracking softer palm oil prices and were further hampered late in the month by the U.S. Supreme Court ruling in favor of biofuel blending exemptions. In June, average U.S. soybean oil prices were at decade-high premiums to both Brazil and Argentina. Palm oil prices were lower mostly due to greater Malaysia production and the announcement of the reduced Indonesia export levy starting in July.
