## 2023/24 U.S. Soybean Production Decline Curtails Exports While Crush Remains Strong

The NASS June *Acreage* report moved commodity markets and upended U.S. soybean export prospects upon its release on June 30. In a surprise to the market, the NASS survey results indicated that 2023/24 U.S. soybean planted area would be 83.5 million acres, 4.0 million below both the March *Prospective Plantings* report and last year's planted acreage number. In line with the 5.7-million-ton reduction in supplies, the U.S. soybean export forecast is lowered to 50.4 million this month.

The 2022/23 U.S. soybean trade market has been characterized by vigorous domestic demand for crush and strong Brazil competition on the global market. The expected continuation of these conditions into the next marketing year coupled with the forecast decrease in supplies means that the deficit will largely be taken out of exports in order to meet domestic demand. The 2023/24 forecast for U.S. soybean exports is lowered by 3.4 million and stocks are reduced by 1.4 million. Crush is only lowered marginally on strong demand for soybean oil for biofuel feedstock.

**U.S. Soybean Exports and Crush**

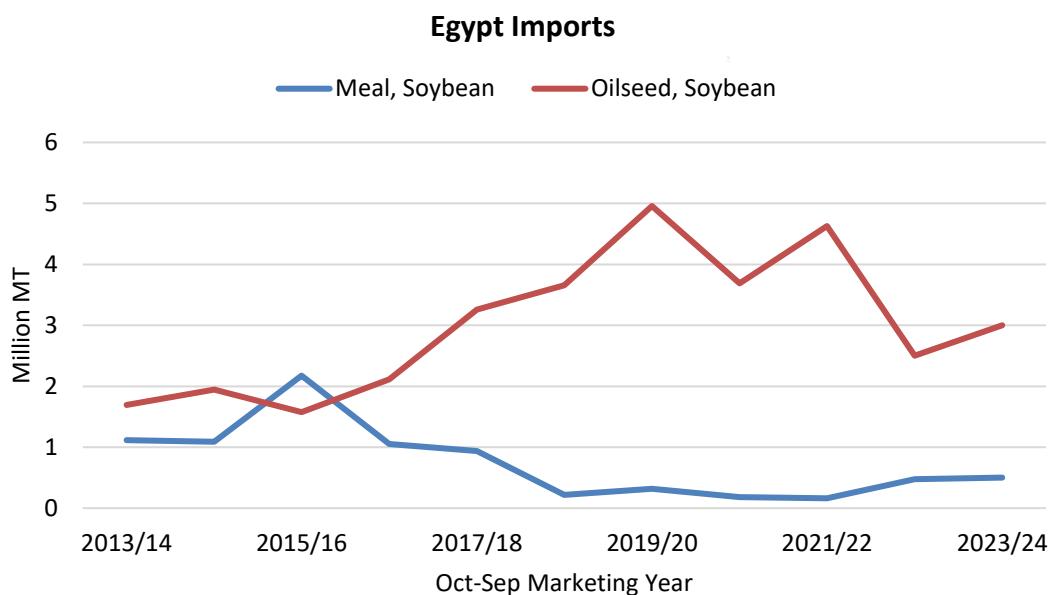

Despite the lower production outlook for the United States, the global soybean output forecast remains at an all-time high, largely on a record Brazil crop and a rebounding crop in Argentina. Slowing demand growth in China, economic difficulties in other major importing countries such as Egypt and Pakistan, and record supplies are expected to result in moderated global soybean prices in 2023/24. The United States will likely remain less competitive than South America in the export market due to smaller supplies and biofuel policy incentives which will keep more soybeans on the domestic market for crushing.

Smaller supplies and strong domestic disappearance in the United States will constrain export potential with trading partners, forcing importers to pay higher prices or increase purchases from Brazil. Offsetting changes to global soybean and product trade this month include larger soybean meal shipments from South America and lowered soybean import forecasts in major U.S. markets including Egypt and Mexico.

## MARKET FEATURES

### Egypt Soybean Imports Plummet by Half in 2022/23

Egypt was the fourth-largest global importer of soybeans in 2021/22 and a major importer of U.S. soybeans. Growing demand from the poultry and aquaculture industries and increased crush capacity had expanded the market at an average annual growth rate near 20 percent for the past 5 years. However, 2022/23 imports are projected to plunge nearly 50 percent due to Egypt's economic and foreign currency challenges.

Egypt has struggled with high inflation and the devaluation of the Egyptian pound in addition to higher global commodity prices. As of July 2023, the government of Egypt (GOE) has devalued the Egyptian pound by half since March 2022 to increase the inflow of foreign currency, to the detriment of the import market. As the Egypt economy strains, the shortage of U.S. dollars has left buyers unable to procure currency to pay for commodity shipments.

The economic conditions have particularly impacted consumers in the import-dependent country, with June food inflation reaching a record 65 percent from the previous year. The lack of feed has forced the poultry industry to cull chicks, harming the industry and driving up domestic food prices. Crush facilities have also been impacted and are operating at low capacity due the shortage of supplies and weak margins.

The GOE has increased issuing letters of credit for commodity purchases, but soybean imports are not projected to fully recover to previous levels in 2023/24 as economic conditions are expected to remain bleak. While inflation is expected to stabilize and the economy expected to somewhat recover relative to the current situation, 2023/24 soybean imports are revised down to 3.0 million tons in line with the ongoing severity of market conditions and the reduction of the soybean crop in the United States, Egypt's primary supplier.

## **DATA SERIES REVISIONS AND PSD DATABASE ADDITIONS**

### **Argentina Cottonseed Production Revision**

Argentina cottonseed production has been revised for 2012/13 through 2023/24 due to the adoption of the Cámara Algodonera Argentina as the source for Argentina cotton production. Feed waste domestic consumption is predominantly adjusted in line with cottonseed production changes.

### **Colombia Palm Oil and Palm Kernel Production Revision**

Colombia palm oil and palm kernel production have been revised for 2000/01 through 2023/24 to align with La Federación Nacional de Cultivadores de Palma de Aceite (FEDEPALMA) statistics and the USDA October-September marketing year. For palm oil, industrial consumption (mostly biodiesel production) and food use consumption are adjusted due to updated production. For palm kernel, domestic crush is adjusted in line with production changes. Additionally, production of Colombia palm kernel meal and oil are updated this month to align with historical FEDEPALMA extraction rates.

### **South Africa Soybean, Sunflowerseed, and Peanut Production Revision**

South Africa production has been revised this month for soybeans (1971/72 – 2023/24), sunflowerseed (1972/73 – 2023/24), and peanuts (1972/73 – 2023/24) to align with the Crop Estimates Committee (CEC) of the South Africa Department of Agriculture, Forestry & Fisheries' historical production estimates. Additionally, the marketing years for all 3 commodities and their products have been revised to March–February from 2009/10 – 2023/24 to better align with the harvest season. Previously, soybeans and products were on a June–May year and peanuts, sunflowerseed, and products were on an April–March year. As a result, trade, consumption, and stocks have been adjusted to reflect the new marketing year. Additionally, for soybeans and sunflowerseed, ending stock estimates have been updated to align with historical CEC stock estimates.

### **South Africa Rapeseed and Products Additions**

As of this publication, USDA's Production, Supply and Distribution database has been expanded to include rapeseed, rapeseed meal, and rapeseed oil balance sheets for South Africa starting in marketing year 2010/11. South Africa rapeseed production has more than tripled over the past decade and is forecast at a record 240,000 tons in 2023/24. The majority of the crop is crushed domestically for meal and oil. However, over the past 2 years, exports to Germany have reached at least 30,000 tons on high global rapeseed prices and South Africa oilseed production has outpaced domestic crush capacities.

### **Ghana Soybean and Products Additions**

As of this publication, USDA's Production, Supply and Distribution database has been expanded to include soybeans, soybean meal, and soybean oil balance sheets for Ghana starting in marketing year 2010/11. Ghana produced about 200,000 tons of soybeans on average over the past 5 years (2018/19 – 2022/23) and is the third largest Sub-Saharan soybean meal importer in the USDA database over that same timeframe, behind only South Africa and Côte d'Ivoire. The soybean meal is used in animal feed rations and the soybean oil is consumed as food, but is quite small in comparison to palm oil food use consumption.

## CIRCULAR FORMATTING UPDATES

After September 2023, Tables 29-31 will be discontinued.

Several formatting revisions were made to the *Oilseeds: World Markets and Trade* report. These revisions do not affect the data available in the PSD system, only which data is highlighted in the tables included within this circular publication. For your awareness, the following updates were made beginning in the July 2023 report:

- Table 18: World Sunflower Products Supply and Distribution now includes Food Use Consumption
- The SME rows for Tables 24, 25, 26, 27, and 28 now include only the top three soy meal equivalent commodities for each country, bloc, or region. All other consumption is included as “other”
- Table 27: China Oilseeds and Products Supply and Distribution now includes a row for Imports of oilseeds. The Imports row for meal has been removed

## **PROJECTION FOR 2023/24**

Global 2023/24 oilseed production is forecast down 4 million tons to 667 million as reduced U.S. soybean and EU rapeseed production is partially offset by higher rapeseed and sunflowerseed crops in Ukraine. Oilseed exports are down overall as lower U.S. soybean exports more than offset higher Ukraine rapeseed and sunflowerseed exports. Global oilseed stocks are down, primarily on lower carryout of U.S. and Brazil soybeans and EU rapeseed, more than offsetting higher Ukraine sunflowerseed stocks. Global meal exports are up on increases in Argentina, Brazil, and India soybean meal and Ukraine sunflowerseed meal exports. Global vegetable oil trade is little changed overall as higher Ukraine sunflowerseed oil exports are offset by lower soybean oil and palm oil exports. The projected U.S. season-average farm price for soybeans is up 30 cents to \$12.40 per bushel.

## **PROJECTION FOR 2022/23**

Global 2022/23 oilseed production is projected at 630 million tons, up 2 million from June. Larger Ukraine and Argentina sunflowerseed crops and India cottonseed production more than offset a smaller Argentina peanut crop. Oilseed trade is up marginally as higher Brazil soybean and Australia rapeseed exports are mostly offset by lower U.S. soybean and Ukraine sunflowerseed exports. Global oilseed crush is little changed overall as reductions in soybean processing, driven mostly by Brazil, are offset by higher China rapeseed and Ukraine sunflowerseed crush. Global vegetable oil trade is little changed this month as reductions to Malaysia and Indonesia palm oil exports are offset by higher Ukraine sunflowerseed oil and Argentina soybean oil exports. Global meal trade is up this month on higher China soybean meal, India rapeseed, and Ukraine sunflowerseed meal exports. Global oilseed stocks are up more than 2 percent on higher China and U.S. soybean and Ukraine sunflowerseed carryout. The projected U.S. season-average farm price for soybeans is unchanged at \$14.20 per bushel.

## **EXPORT PRICES**

Average soybean export prices increased slightly for all major exporters in June. Prices rose in the early part of the month on concerns about U.S. Midwest crop conditions. However, prices plunged after the announcement of the finalized EPA biofuel blending mandates on June 21, which fell short of industry expectations. On the last day of the month, the release of the NASS June *Acreage* report caught the market by surprise and drove prices sharply upwards, rising 79 cents per bushel in 1 day for the most liquid contract on lower planted acreage.

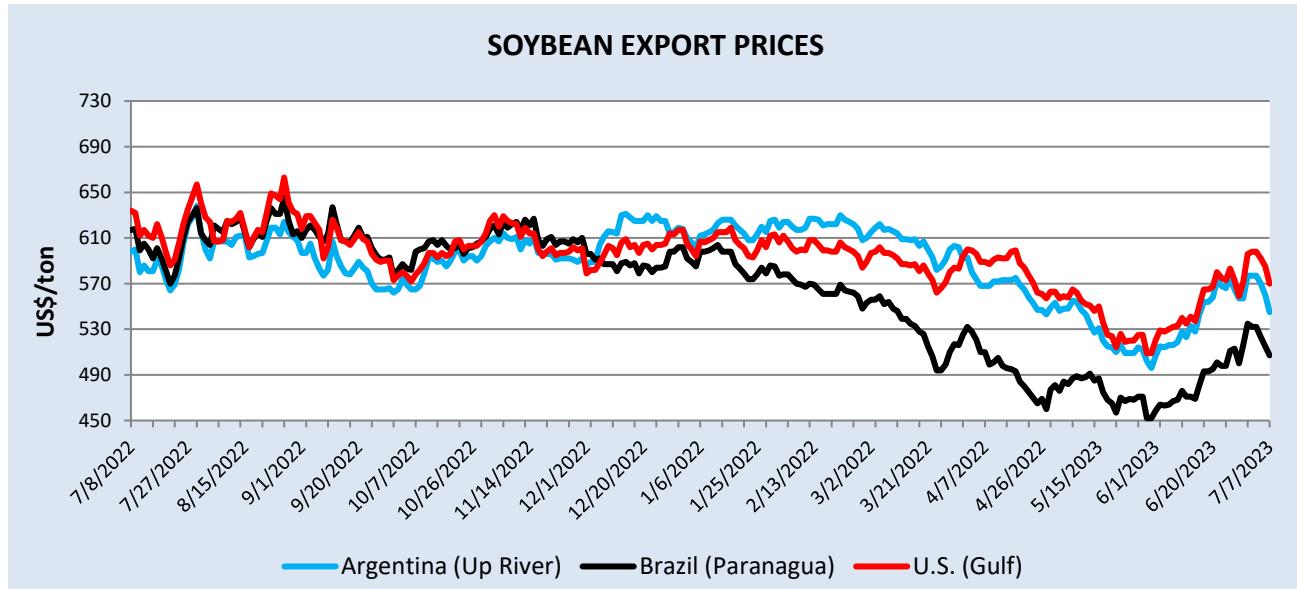

Soybean oil prices also moved higher at the end of the month, buoyed by the forecast reduction in U.S. supplies. This shift in dynamics further widened the premium for U.S. soybean oil over South America origins. U.S. soybean oil FOB prices are now nearly \$400/ton more expensive than the largest exporter, Argentina. Notably, palm oil prices resumed trading at a normal discount to soybean oil this month in part due to higher Malaysia palm oil stocks.

Soybean meal prices finished lower on higher crush and ample supplies of alternative protein meals.

North America: Canada, Mexico, the United States

Central America: Belize, Costa Rica, El Salvador, Guatemala, Honduras, Nicaragua, Panama

Caribbean: Cuba, Dominican Republic, Haiti, Jamaica, Trinidad and Tobago

South America: Argentina, Bolivia, Brazil, Chile, Colombia, Ecuador, Guyana, Paraguay, Peru, Suriname, Uruguay, Venezuela

EU: Austria, Belgium/Luxembourg, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Malta, Netherlands, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, and Sweden. Effective January 1, 2021, the separation of the United Kingdom (UK) from the European Union (EU) was complete, including trade between both entities. Starting in May 2021 with the release of 2021/22 data, grain PSDs reflect EU27 (shown in the PSD system as "European Union") and UK separately. Beginning with the release of 2021/22 data, historical data for both EU27 and the UK are provided for 5 years (2016/17 through 2020/21).

Other Europe: Albania, Bosnia and Herzegovina, Former Yugoslavia, Gibraltar, Iceland, North Macedonia, Montenegro, Norway, Serbia, Switzerland, United Kingdom

Former Soviet Union: Armenia, Azerbaijan, Belarus, Georgia, Kazakhstan, Kyrgyzstan, Moldova, Russia, Tajikistan, Turkmenistan, Ukraine, Uzbekistan

Oceania: Australia, Fiji, New Zealand, Papua New Guinea

## OTHER NOTES

Marketing Years (MY): MY refers to the 12-month period at the onset of the main harvest, when the crop is marketed (i.e., consumed, traded, or stored). The year first listed begins a country's MY for that commodity (2022/23 starts in 2022); except for oilseeds in certain Southern Hemisphere countries, where the second year begins the MY (2022/23 starts in 2023). For a complete list of local marketing years, please see the FAS website (<https://apps.fas.usda.gov/psdonline/>): go to Reports, Reference Data, and then Data Availability.

Stocks: Unless otherwise stated, stock data are based on an aggregate of differing local marketing years and should not be construed as representing world stock levels at a fixed point in time.

Consumption: World totals for consumption reflect total utilization, including food, seed, industrial, feed, and waste; as well as differences in local marketing year imports and local marketing year exports. Consumption statistics for regions and individual countries, however, reflect food, seed, industrial, feed, and waste only.

Trade: All PSD tables are balanced on the different local marketing years.
