

Oilseeds: World Markets and Trade

Slower Soybean Supply Growth Limits Carryout Gains

Global Oilseeds Year-Over-Year Changes

2025/26 GLOBAL OILSEED OUTLOOK

Global oilseed production in 2025/26 is forecast at a record 692 million tons, up 2 percent compared to the 2024/25 marketing year. Production gains are led by higher soybean output in South America, but at a lower rate of growth than in recent years. Following last year's drought which reduced yields across Europe, sizeable recoveries are expected for both rapeseed and sunflowerseed. Global soybean production is forecast to rise nearly 6 million tons to almost 427 million on a larger Brazil crop, despite lower soybean harvests expected in the United States, Canada, and Argentina. Global rapeseed production is expected to rebound over 5 percent on gains in the European Union, Canada, and Russia, far outpacing declines in the United States, the United Kingdom, and Ukraine. World sunflowerseed production is forecast to grow 4 million tons on substantial recovery in the European Union, Ukraine, and Russia. Other oilseeds including peanuts, palm kernel, and copra are also expected to grow marginally.

Global oilseed consumption is forecast to rise 3 percent in 2025/26, driven by increased soybean, rapeseed, peanut, and sunflowerseed crush. Global oilseeds crush is forecast at a record 580 million, largely on increased soybean utilization and recovery in sunflowerseed and rapeseed crush. Global soybean crush is projected to grow on higher crush in China, the United States, Brazil and Argentina, as well as in importing countries like Egypt, Bangladesh, and Pakistan. Global rapeseed crush is forecast to expand by nearly 2 percent as crushing increases across the globe, notably so for the European Union, India, and Canada.

Global oilseed trade is forecast to grow 3 percent, almost entirely on soybean exports which offset a decline in rapeseed exports. Record Brazil soybean exports contrast with slightly lower U.S. exports due to a smaller crop and increased domestic utilization. Import growth is led by China, Argentina, Egypt, Pakistan, and Bangladesh soybean imports. Rapeseed trade is forecast to decline nearly 4 percent on decreased EU imports as its domestic production recovers.

Global Oilseed Exports and Year-over-Year Export Growth

Global oilseed ending stocks are forecast to grow nearly 2 million tons to 143 million. Soybean ending stocks are forecast to decrease in the United States, while soybean stocks in Argentina and Brazil are expected to climb moderately, along with mild stock growth in major soybean importing countries. China soybean stocks are expected at a similar level as the preceding year.

Global oilseed meal production is forecast to grow 3 percent to 400 million tons led by raised soybean crush in China, the United States, Brazil, and Argentina. Sunflowerseed meal production is forecast to increase

10 percent as EU and Ukraine sunflowerseed crush recovers.

Global oilseeds meal consumption is forecast to grow nearly 4 percent on increased soybean meal demand within China, Brazil, the United States, and Southeast Asian countries. Sunflower meal consumption is forecast 10 percent higher, driven by consumption gains in China and the European Union.

Oilseed Complex Consumption Growth

Global vegetable oil production is forecast to grow 3 percent in 2025/26 to nearly 235 million tons. Palm oil production is forecast up 3 percent to 80 million tons, led by raised production in Indonesia and recovery in Malaysia. Soybean oil production is forecast to reach another record high – approaching 71 million tons – as China, the United States, Argentina, and Brazil increase soybean crush. Sunflowerseed oil production is forecast up 9 percent from the current year as crush recovers in Ukraine and the EU. Production of olive oil is forecast to decline. **Global vegetable oil consumption** is forecast to grow 2 percent. Growth in food use is anticipated to outpace minimal growth in industrial use for 2025/26. Global vegetable oil food use is expected to grow on increased consumption of soybean, sunflowerseed, and palm oil. China and India lead growth in food use while the United States leads gains in industrial use through soybean oil consumption.

Industrial Consumption of Vegetable Oils (2025/26)

Food Use Consumption of Vegetable Oils (2025/26)

Global vegetable oil trade is forecast to grow 3 percent for 2025/26 as a recovery in palm and sunflowerseed oil trade offsets a decrease in soybean oil trade. Raised palm oil production in Indonesia and an anticipated increase in price competitiveness against soybean oil supports a 1.8-million-ton gain in palm oil exports. Soybean oil exports are forecast to decrease marginally to 13.7 million tons on lower exports from the United States and China. **Global vegetable oil ending stocks** are unchanged at 29 million tons.

2025/26 COMMODITY OUTLOOKS

SOYBEANS

Global soybean production is forecast at a new record in 2025/26, with yet another record crop in Brazil driving global production despite smaller crops in North America. Soybean imports are forecast at a new record. Continued recovery in the oilseed processing sectors of Pakistan, Egypt, and Bangladesh accompanied by increased crush from global soybean importers continues to push global imports higher. Record soybean exports are expected from Brazil, aided by an ample crop. Argentina imports are forecast up on higher supply in Paraguay.

Global soybean stocks are expected to increase slightly. China is forecast to hold stocks at a similar level to the preceding year. Carryout in the United States is expected to fall to 8 million tons on a smaller crop and increasing crush utilization. Argentina and Brazil are expected to slightly increase ending stocks in 2025/26 (Oct-Sept) when compared to the preceding year.

Global soybean consumption is forecast to rise in all major markets but the European Union, driven by growth in global feed demand and competitive soybean meal prices. Higher domestic consumption is increasingly supported by higher domestic processing of soybeans rather than increased trade. Soybean meal trade is forecast at a new record, but growth is expected to slow from the robust gains in recent years. Argentina, the leading soybean meal exporter, is forecast to modestly increase exports, with similar gains expected from the United States.

Global soybean oil production is forecast to grow to a new record in 2025/26, but exports are expected to fall compared to the preceding year. Higher production in Brazil and the United States is expected to be captured by domestic use. Due to growing crush in major soybean importing countries, soybean oil stocks are expected to grow slightly in 2025/26 despite reduced trade in oil.

RAPESEED

Global Rapeseed Exports and Market Share

Global rapeseed production in 2025/26 is forecast at near record levels on the highest area estimate on record partially offset by trend yields. Canada is expected to remain the top producer, closely followed by the European Union. Rapeseed exports are expected to decline, largely on reduced Canada exports on account of reduced carryin. The recent uptick in China's purchases of rapeseed in reaction to tariffs on Canadian rapeseed products contribute to lower global 2025/26 beginning stocks. Rapeseed crush is forecast at a record on an expected recovery in EU utilization of rapeseed and higher crush in Canada and India. Global ending stocks are largely unchanged with higher production in 2025/26 halting the drawdown of stocks seen in 2024/25.

Global Rapeseed Meal and Oil Exports, Canada Rapeseed Crush

Despite record crush, rapeseed meal trade is not expected to grow in 2025/26. China imports of rapeseed meal are expected to continue declining in 2025/26 as it seeks less costly alternatives to Canada rapeseed. Rapeseed oil exports are similarly expected flat year over year and Canada is expected to ship less in 2025/26. The production of rapeseed meal and oil in Canada is still expected to grow, but at a lower pace. Despite announced growth in Canada's crush capacity, lower canola meal exports to China and uncertainty over U.S. biofuel policy are expected to constrain utilization.

SUNFLOWERSEED

Recovery is expected in global sunflowerseed production on improved yields in continental Europe. Leading the recovery are the European Union and Ukraine, with Russia and Turkey also boosting production. Consistent with higher production, crush is expected to rise in the aforementioned countries.

The recovery in sunflowerseed crush will enable a rebound in sunflowerseed products from 3-year lows realized in 2024/25. Substantial increases of sunflowerseed oil imports are expected in China and India, largely for food use. China is also expected to expand imports of sunflowerseed meal as it seeks alternatives to rapeseed meal.

PALM OIL

Global palm oil production for 2025/26 is forecast to expand as Indonesia output reaches record highs on increased planting and Malaysia production rebounds on improved weather conditions. Palm oil trade is forecast to grow following a year-over-year decline in 2024/25. As palm oil supply rebounds, price competitiveness is expected to increase relative to other vegetable oils and spur import demand. Domestic consumption is forecast higher on raised food use consumption in China, India, Indonesia, and across Africa. Industrial consumption of palm oil is forecast to reach record highs as Indonesia increases palm oil usage in biofuel blending. Palm oil ending stocks are nearly unchanged for 2025/26.

OVERVIEW 2025/26

Global oilseed production is forecast higher in 2025/26 on increases in Brazil soybeans, EU, Canada, and Russia rapeseed, as well as EU and Ukraine sunflowerseed. Accordingly, crush, trade, and ending stocks are all expected higher. Crush is elevated on higher processing of soybeans in China, the United States, Argentina, and Brazil. Ukraine and EU sunflowerseed also contribute to the growth in crush. Oilseeds trade is forecast higher on Brazil soybean exports. Global oilseed carryout is slightly higher on growth in soybean, peanut, cottonseed, and rapeseed global ending stocks. The United States is expected to draw down soybean ending stocks.

Global meal trade is up due to increases in the United States and Argentina soy meal exports. Global oil production is forecast higher on increases to China and U.S. soy oil, Indonesia and Malaysia palm oil, and Ukraine and EU sunflowerseed oil. Overall oil trade is up on Indonesia and Malaysia palm oil and Ukraine sunflowerseed oil exports.

The projected U.S. season-average farm price for soybeans is \$10.25 per bushel.

OVERVIEW 2024/25

Global oilseed production is raised slightly on upward revisions for Central African Republic peanuts as well as Zambia and Uruguay soybeans, which are not offset by a downward revision for Paraguay soybeans. Oilseed trade is reduced on lower shipments from Brazil, Paraguay, Ukraine, and Argentina soybean exports, despite an increase in U.S. exports. Global crush is decreased on lower China and South Korea soybean and Ukraine sunflowerseed processing. Global oilseed carryout is higher, largely on higher Brazil soybean and China rapeseed stocks.

Global protein meal trade is decreased on lower shipments of Ukraine sunflowerseed meal coupled with China and EU soybean meal exports. Global vegetable oil production is slightly lower on reduced Ukraine sunflowerseed oil and China soybean oil. Global vegetable oil trade is also lower on reduced Thailand palm oil and Ukraine sunflowerseed oil.

The projected U.S. season-average farm price for soybeans is unchanged at \$9.95 per bushel.

EXPORT PRICES

Soybean prices have rebounded from the brief drop at the beginning of April in response to tariff announcements. Brazil and U.S. soybeans prices have remained relatively constant while Argentina soybeans have declined since mid-April on the devalued Argentine peso. Soybean meal prices generally tracked with soybeans and have remained fairly constant. Argentina soybean meal remains the most price competitive.

Brazil and Argentina soybean oil prices slowly tracked downwards over the past month while U.S. soybean oil prices increased steadily since mid-April. U.S. soybean oil prices surpassed other vegetable oils and is selling at a premium in comparison to Brazil and Argentina oil. The price increase is likely attributed to robust domestic and export demand. The price of EU rapeseed oil continues to remain high on tight supplies. Indonesia and Malaysia palm oil prices slowly dropped throughout the month of April on recovering production and tight stocks of palm oil in both countries.

Source: International Grains Council. All prices are FOB: U.S. Gulf, Argentina Up River, and Brazil Paranagua.

ENDNOTES

REGION DEFINITIONS

North America: Canada, Mexico, the United States

Central America: Belize, Costa Rica, El Salvador, Guatemala, Honduras, Nicaragua, Panama

Caribbean: Cuba, Dominican Republic, Haiti, Jamaica, Trinidad and Tobago

South America: Argentina, Bolivia, Brazil, Chile, Colombia, Ecuador, Guyana, Paraguay, Peru, Suriname, Uruguay, Venezuela

EU: Austria, Belgium/Luxembourg, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Malta, Netherlands, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, and Sweden. Effective January 1, 2021, the separation of the United Kingdom (UK) from the European Union (EU) was complete, including trade between both entities. Starting in May 2021 with the release of 2021/22 data, grain PSDs reflect EU27 (shown in the PSD system as “European Union”) and UK separately. Beginning with the release of 2021/22 data, historical data for both EU27 and the UK are provided for 5 years (2016/17 through 2020/21).

Other Europe: Albania, Bosnia and Herzegovina, Former Yugoslavia, Gibraltar, Iceland, North Macedonia, Montenegro, Norway, Serbia, Switzerland, United Kingdom

Former Soviet Union: Armenia, Azerbaijan, Belarus, Georgia, Kazakhstan, Kyrgyzstan, Moldova, Russia, Tajikistan, Turkmenistan, Ukraine, Uzbekistan

Middle East: Afghanistan, Bahrain, Iran, Iraq, Israel, Jordan, Kuwait, Lebanon, Oman, Qatar, Saudi Arabia, Syria, Turkey, United Arab Emirates, and Yemen

North Africa: Algeria, Egypt, Libya, Morocco, Tunisia

Sub-Saharan Africa: all African countries except North Africa

East Asia: China, Hong Kong, Japan, South Korea, North Korea, Macau, Mongolia, Taiwan

South Asia: Bangladesh, Bhutan, India, Nepal, Pakistan, Sri Lanka

Southeast Asia: Brunei, Burma, Cambodia, Indonesia, Laos, Malaysia, Philippines, Singapore, Thailand, Vietnam

Oceania: Australia, Fiji, New Zealand, Papua New Guinea

OTHER NOTES

Marketing Years (MY): MY refers to the 12-month period at the onset of the main harvest, when the crop is marketed (i.e., consumed, traded, or stored). The year first listed begins a country's MY for that commodity (2022/23 starts in 2022); except for oilseeds in certain Southern Hemisphere countries, where the second year begins the MY (2022/23 starts in 2023). For a complete list of local marketing years, please see the FAS website (<https://apps.fas.usda.gov/psdonline/>): go to Reports, Reference Data, and then Data Availability.

Stocks: Unless otherwise stated, stock data are based on an aggregate of differing local marketing years and should not be construed as representing world stock levels at a fixed point in time.

Consumption: World totals for consumption reflect total utilization, including food, seed, industrial, feed, and waste; as well as differences in local marketing year imports and local marketing year exports. Consumption statistics for regions and individual countries, however, reflect food, seed, industrial, feed, and waste only.

Trade: All PSD tables are balanced on the different local marketing years.

Oilseeds HS Codes

	Seed	Meal	Oil
Soybeans	1201	2304, 230250, 120810	1507
Peanuts	Unshelled: 120210, 120241 Shelled: 120220, 120242, 120230, 200811XX ⁽¹⁾	2305	1508
